Welcome to Beaute' Medical Aesthetics

Intimacy and Confidence Shift After 40

It's no secret that hormonal changes after 40 can affect more than mood and metabolism—they can also impact intimacy, urinary health, and vaginal comfort. Many women experience vaginal dryness, decreased libido, discomfort during intercourse, or urinary stress incontinence. At Beaute' Medical Aesthetics, we offer the **O-Shot®**, a natural, non-surgical treatment that uses your body's own growth factors to rejuvenate and restore.

02

What Is the O-Shot®?

The O-Shot® (Orgasm Shot) is a regenerative treatment that uses **Platelet-Rich Plasma (PRP)** to stimulate tissue healing, increase blood flow, and regenerate vaginal and clitoral sensitivity. A small blood sample is drawn, spun in a centrifuge, and the concentrated platelets are injected into specific areas to trigger growth and collagen production. The result? Improved sexual response, comfort, and confidence.

At Beaute', we use the **ProGen PRP system**—a medical-grade kit known for delivering a **98% platelet capture rate**, ensuring optimal results.

03

Why Consider the O-Shot®?

Hormonal fluctuations during perimenopause, menopause, or after childbirth can lead to:

- **Vaginal Dryness**
- **Pain During Intercourse**
- **Decreased Sensitivity and Arousal**
- **Difficulty Achieving Orgasm**
- **Mild Urinary Incontinence**

The O-Shot® is designed to naturally restore these functions using the body's own healing factors—no drugs, downtime, or surgery required.

O4

Benefits of the O-Shot®

- Increased vaginal and clitoral sensitivity
- Enhanced natural lubrication
- More frequent and stronger orgasms
- Reduction in urinary stress incontinence
- Improved sexual confidence and comfort
- Safe, fast, and minimally invasive

- 7 -

O5

Combination Therapy Options at Beaute'

While the O-Shot® is powerful on its own, we offer combination therapies for even greater results:

- **Laser Vaginal Rejuvenation (Phoenix CO2):**
Tightens and tones vaginal walls
- **Hormone Replacement Therapy (\$399 with pellets):** Balances estrogen, progesterone, and testosterone to support libido and tissue health
- **Myers Cocktail IV Therapy:** Supports hydration and hormone function
- **Exosome or Wharton's Jelly Add-On:** For women who are not candidates for PRP or want additional regenerative support

06

Ideal Candidates for the O-Shot®

- Women 40+ experiencing intimacy-related concerns
- Perimenopausal, menopausal, or postpartum women
- Hemoglobin of 10 or higher
- Not pregnant or breastfeeding
- Not currently on blood thinners or steroids

07

What to Expect

- Procedure takes 30 minutes or less
- Minimal discomfort with topical numbing
- No downtime—can resume normal activity the same day
- Results typically seen within **1–3 weeks**, with continued improvement over time
