Welcome to Beaute' Medical Aesthetics

What Is the P-Shot®?

The Priapus Shot®, commonly known as the P-Shot, is a regenerative therapy using Platelet-Rich Plasma (PRP) derived from your own blood to support male sexual health. It works by improving blood flow, nerve sensitivity, and tissue health in the penis.

At Beautè Medical Aesthetics, we specialize in natural, evidence-based options that restore confidence and improve quality of life.

02

Who Is the Ideal Client?

The P-Shot is ideal for men experiencing:

- **Erectile dysfunction (ED), including mild to moderate cases**
- **Decreased sexual sensation or performance**
- **Difficulty achieving or maintaining erections**
- **Peyronie's disease (penile curvature)**
- **Age-related decline in sexual function**
- **Post-prostate surgery changes**

Clients must have a hemoglobin level of 10 or greater.

This treatment is safe for most men and offers a natural, drug-free solution to common sexual health concerns.

03

What Are the Benefits?

- Improved firmness and duration of erections
- Enhanced sensitivity and pleasure
- Better blood flow and circulation
- Possible increase in length and girth over time
- May reduce penile curvature (Peyronie's Disease)
- Results lasting 12 months or longer with maintenance

04 Our Advanced P-Shot Options

Beauté Medical Aesthetics offers advanced enhancements to maximize your results:

- **Bocox:** Neurotoxin injected into the penis to support muscle relaxation and blood flow
- **Bellafill Penile Filler:** For clients seeking added girth and structural support
- **Wharton's Jelly:** Regenerative stem cell therapy for those ineligible for PRP
- **Penile Ultrasound:** Optional imaging for vascular mapping and safety
- **Shockwave Therapy:** May be used adjunctively to improve circulation and tissue regeneration

05

What to Expect During Your Visit

1. **Private Consultation** — Conducted virtually or in-office to discuss goals, health history, and candidacy.

2. **PRP Collection** — Your blood is drawn and processed using the ProGen PRP kit with a 98% platelet recovery rate.

3. **Numbing + Injection** — A topical anesthetic ensures comfort. PRP is injected into specific penile tissues.

4. **Aftercare** — Minimal downtime; clients may resume normal activity within hours. No sex for 24 hours post-procedure.

06

Combination Therapy Options

Clients may benefit from:

- Monthly Myers Cocktails to support vascular health
- Testosterone optimization or hormone replacement therapy
- Lifestyle support to improve nitric oxide production (diet, hydration, exercise)

07

Why Choose Beautè Medical Aesthetics?

- Procedures performed by a double board-certified Nurse Practitioner
- High-quality PRP kits (ProGen)
- Private, discreet treatment environment
- Flexible payment options (Afterpay, Cherry, PatientFi)
