

FOR IMMEDIATE RELEASE

Tiny Heroes, Massive Impact: New Animated Series Could Save the Planet One Bee at a Time

***"Guardians of the Garden" Launches 2026 as Entertainment Industry's
First Collectible-Driven Environmental Movement***

Las Vegas, NV – 10/10/2025— As bee populations plummet by 70% and threaten global food security, *AI Wonder Studios* —the award-winning animation company behind multiple international film festival winners—announces *Guardians of the Garden*, a groundbreaking 3D animated series launching in 2026. This isn't just entertainment; it's the first animated series designed to mobilize families into environmental action through Disney Pixar-quality storytelling, education and activation tools, and a collectibles culture.

A Story with Life-Changing Purpose

Set in a lush, living garden teeming with personality and wonder, *Guardians of the Garden* follows eight extraordinary female bee heroes —led by Marabel, Buzzillion, Waggles, and BeeWell—as they face real-world threats from pesticides, habitat loss, and climate change. Each episode invites audiences into a world where nature speaks, choices matter, and small acts of kindness can change everything.

"We wanted to create a story that entertains and enlightens," said Stephen Meade, Creator and Executive Producer. "This project shows kids that they don't have to be superheroes to make a difference. Every small action—like planting a flower or saving a bee—can ripple through the world."

With bees responsible for pollinating one-third of our food supply now vanishing at unprecedented rates, this series transforms environmental education into pure family adventure. Guided by the studio's resident beekeeping expert consultant, every episode balances fun and fantasy while teaching genuine bee science and environmental stewardship.

"We're witnessing the collapse of our pollinator populations in real-time," says Carrie, the resident beekeeping expert, who has personally witnessed bee decline over the decades. "But instead of scaring children, we're empowering them to become the solution."

The Crisis Meets the Solution

Industry-First Environmental Impact Goal

Guardians of the Garden aims to inspire and mobilize one billion people worldwide to take pollinator-protecting actions—from planting bee-friendly gardens to supporting sustainable agriculture. The series targets major streaming platforms, including Netflix, Amazon Prime, and Disney+, for global distribution.

Beyond Entertainment: A Collectible Empire with Purpose

Breaking new ground in purpose-driven content, *Guardians of the Garden* launches alongside a comprehensive collectible ecosystem featuring:

- Limited-edition numbered merchandise with a certificate of authenticity
- Holographic trading cards following the Pokémon collectible model
- Mobile gaming app with character collection gameplay
- Labubu-style character variations create ongoing collection cycles
- Digital IP assets secured through Web3 technology integration

This strategy mirrors recent collectible successes, such as Labubu's \$ 1 billion phenomenon, but adds an authentic environmental impact that resonates with socially conscious families.

Award-Winning Studio with Proven Innovation

AI Wonder Studios brings numerous international awards and film festival recognition to this ambitious project, including their recent Grand Prize win at Silicon Beach Film Festival and screening at the iconic TCL Chinese Theatre in Hollywood.

Revolutionary Technology Meets Environmental Mission

Powered by *AI Wonder Studios'* proprietary **AI Wonder Engine™**, *Guardians of the Garden* represents a breakthrough in AI-assisted animation production. This next-generation creative framework seamlessly blends human imagination with machine intelligence, enabling Disney Pixar-style 3D animation while maintaining complete creative control and IP ownership.

The AI Wonder Engine™ guides every stage of production—from concept ideation to cinematic universe expansion—through integrated AI and Web3 technologies, enabling rapid creation of premium visual assets within a secure, collaborative ecosystem.

"The AI Wonder Engine™ isn't just changing how we make animation—it's transforming how we can impact the world through storytelling," says Andy Broadway. "We can now create world-class content while building a comprehensive collectible universe that funds real environmental change."
