

THE HOW AND WHY OF CYBERSECURITY:

INSIDER THREAT PROTECTION

An insider threat is an individual employed by the company that uses their access for nefarious activities.

This threat has been more prevalent over the past years especially with larger companies.

These users can transfer trade-secrets, sensitive data, or assist in the compromise of endpoints.

Implement Least-privilege access

Separate access based on role

Offboarding process is defined

Implement a Data Loss Prevention solution

Implement a SIEM tool for continuous monitoring and alerting
