

Charlz Token

Bison Paper

WE THE BISON - INTRODUCTION

\$Charlz Token is a bison, not a dog, but fun fact, baby bison are actually referred to as "red dogs" due to their orange-red color. We are no more than a bison s#!t coin on the Cardano Ecosystem that has 0 value and promises 0 gains. Our goal is that our mediocre bison memes bring you and Papa Charles countless laughs. And of course make the entire herd memellionaires!

GRABBING THE BISON BY THE HORNS

To our knowledge the only man to ever grab a bison by the horns is Papa Charles himself. To avoid an accident, it's better to love bison from a distance. The only technical details are determining a bison's mood. If it's tail hangs down normally they are calm, but if the tail stands up it could charge at any moment. No matter what the tail is doing, bison are unpredictable, just like \$Charlz.

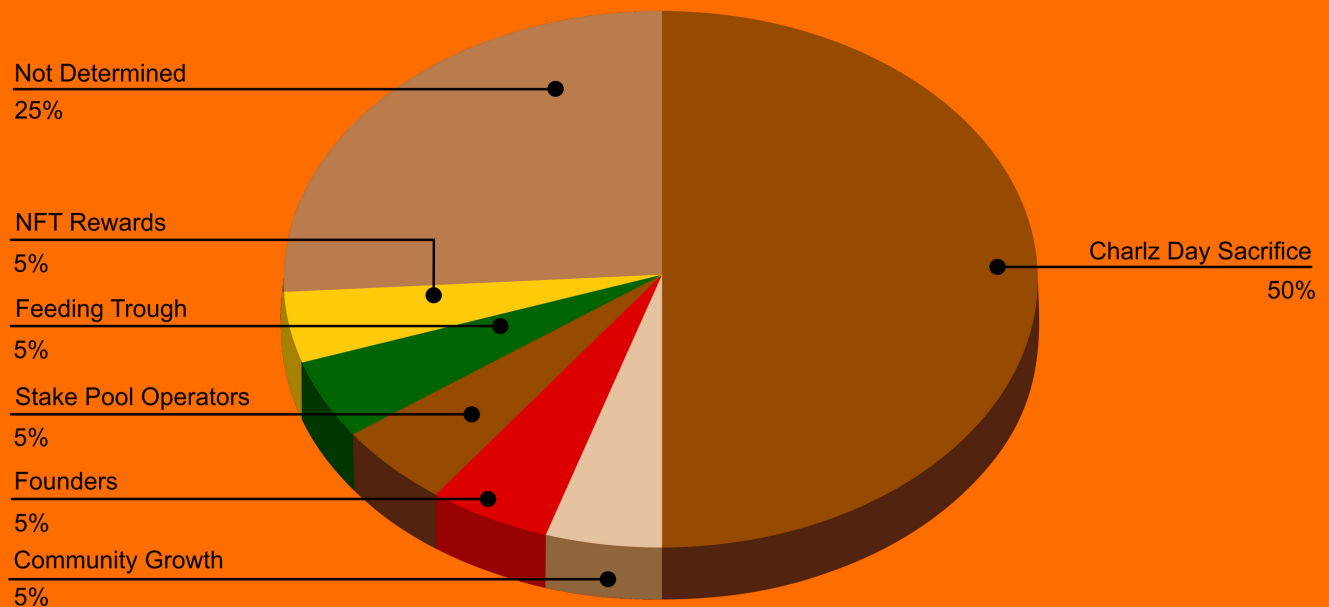

WHAT THE CHARLZ?

Our goals of \$Charlz Token isn't to only provide low-quality memes, but to become the greatest meme token on the Cardano Ecosystem and give back to help conserve the bison. This project is all about community. Spread the word to grow the herd.

BISONOMICS

On the graph below you'll see the full token distribution. Below the graph is a detailed breakdown of where all the tokens will be allocated.

TOTAL SUPPLY: 100,000,000,000,000

CHARLZ DAY SACRIFICE

50% of the total supply will be set aside to a wallet that Charles Hoskinson can claim at any point; however, 1T tokens will be burned from the wallet each Sunday for the next 50 weeks. Will Charles ever claim his \$Charlz?

FEEDING TROUGH

5% will be allocated to the feeding trough where the community will have access to the \$Charlz Token faucet featured on charlz.io/charlzfaucet.

NFT REWARDS

Every NFT has a rarity score attached based on the rarity of the individual traits of the NFT. The rarity score equates to the interest in \$Charlz token paid out to the NFT holder every week (e.g. If you have an NFT with a rarity score of 2M, then that NFT will reward you 2M \$Charlz tokens per week). These NFTs guarantee a pre-defined return and therefore act as bonds. The NFTs can be traded on a secondary market between investors seeking a certain yield in \$Charlz tokens, thus creating one of the first bond markets on Cardano. 5% of the total supply (5T \$Charlz) will be allocated to this reward system for our NFT holders and will last for 50 weeks. \$Charlz is pioneering the space of "Meme-Fi" or MemeFinance.

STAKE POOL OPERATORS

5% of the total supply will be allocated to SPOs for distribution.

COMMUNITY GROWTH

5% of total supply will give the community an opportunity to gain tokens by being active leaders in our herd.

NOT DETERMINED

The community will have a major impact on the decisions of the 25% of supply that is not yet determined.

TEAM

Lastly, 5% of the total supply will be in the hands of our team. We plan to HODL \$Charlz until the day the bison becomes extinct.
