- Detoxification
- Cellular rejuvenation
- Collagen production
- Reduce nerve activity
- Reduce back pain
- Better sleep
- Reduction in depression & anxiety
- Help with alzheimer's
- Help with insomnia
- Help with migraines

Cold-shock Proteins - Cryotherapy may promote protein synthesis at the end of dendrites where synapses form and may protect our brain cells from cognitive and behavioral deficits associated with some neurodegenerative diseases.¹

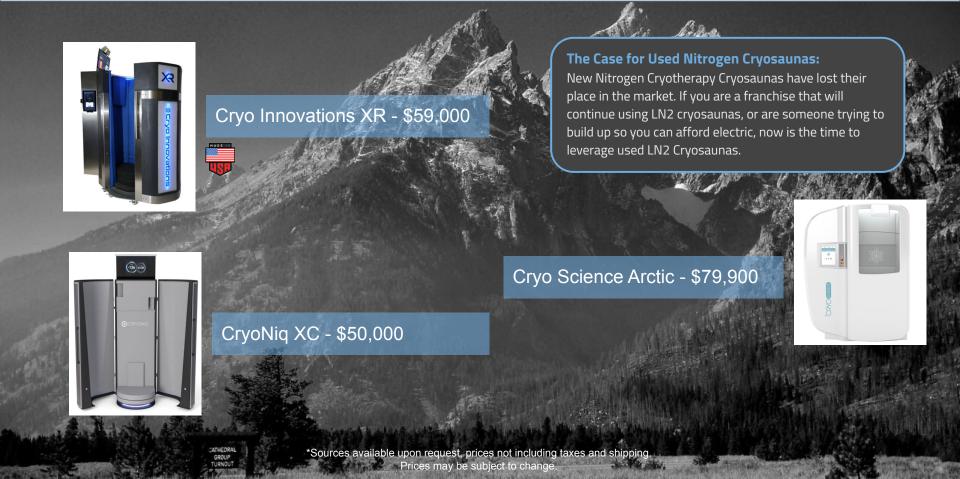

Thermogenesis - when our bodies are exposed to super cold temps, our metabolic response warms the body through a process called thermogenesis. Our bodies respond to cold by producing more mitochondria, converging our body's tissues into more metabolically active ones. The greater amount of metabolically active tissues our body has, the more fat it will burn.³

NITROGEN BASED CRYOTHERAPY - EQUIPMENT

ELECTRIC CRYOTHERAPY - EQUIPMENT

COLD PLUNGE THERAPY - EQUIPMENT

BEYOND RED LIGHT (BIO MED BED)

Energy, Frequency & Vibration

RED LIGHT (PHOTOBIOMODULATION)

- Improves hair growth
- Helps sun damaged skin
- Promotes wound healing and tissue repair
- Helps with cancer patients
- Relieves short term muscle pain
- Helps get rid of scars
- Improves skin complexion
- Reduces cold sores
