

DECENTRALIZED FLEXIBILITY

ICP doesn't impose rigid structures.

You have freedom in organizing content within canisters.

No fixed folder structures.

Design your website's content layout as you see fit.

Create canisters for different parts.

Organize content based on user roles (e.g., public vs. admin).

Use canisters for microservices (e.g., authentication, payment processing).

Implement dynamic canister creation based on user preferences or context.

ACCESS CONTROL

Define who can access specific canisters.

Set permissions based on public keys.

Specify who can view or modify content by managing access permissions.

Use access control for fine-grained authorization (e.g., read-only vs. write access).

Implement role-based access control (RBAC) for canisters.

Explore context-aware access control (e.g., location-based permissions).

CANISTERS

Represent different parts of your website. Each canister has a unique address on the blockchain.

Create canisters for homepage, images, videos, scripts, etc. Tokenize assets into canisters.

Use canisters for microservices (e.g., authentication, payment processing).

Organize canisters by content type (e.g., media canisters, data canisters).

Create canisters dynamically based on user interactions (e.g., user-generated content).

ASSETS AND TOKENS

Tokenize assets into canisters. Canister tokens represent ownership or access rights to the asset.

Convert your website's assets (images, videos, etc.) into canister tokens.

Tokenize user-generated content (UGC) for moderation or rewards.

Use canister tokens for in-app purchases or subscriptions.

Introduce fractional ownership of canister tokens (NFT-like shares).

HOST A WEBSITE ON INTERNET SMART CONTRACTS

DOCUMENT VERSION 0.1

Manage interaction between canisters and users. Handle permissions, updates, and dynamic content.

Use smart contracts to define access rules, update content, and orchestrate canister actions.

Implement voting mechanisms, escrow services, or subscription models.

Use smart contracts for decentralized identity management (DID).

Create smart contracts that adapt their behavior based on user behavior (machine learning-based).

DYNAMIC CONTENT UPDATES

Smart contracts allow seamless updates. Users always see the latest version of content.

Update canisters dynamically (e.g., add new images) without disrupting user experience.

Trigger content updates based on external events (e.g., real-time data feeds).

Use event-driven smart contracts for real-time content synchronization.

Implement predictive content updates (anticipating user preferences).

SUBNET

A range of IP addresses within your VPC. Subnets determine how resources communicate and route traffic.

They can be public, private, VPN-only, or isolated.

Configure subnets to manage traffic flow and security within your network.

Use subnets for workload isolation (

SEO AND URLS

While ICP doesn't enforce specific URL structures, you can create meaningful URLs for canisters.

Design user-friendly URLs (subdomains or paths) for better SEO and navigation.

Optimize URLs for localization (e.g., language-specific paths).

Use descriptive URLs that reflect content hierarchy (e.g., /blog/article-title).

Experiment with personalized URLs based on user profiles or preferences.

MAURY LAMBRIGHT

Known as Maury, He is a seasoned professional with over 20 years of combined experience across diverse industry sectors. His journey has spanned retail, tourism, audio production, photography, on-stage in theater, and hospitality. Since 2022, Maurice has transitioned into the Human Resources field, focusing on Training and Development. He actively creates engaging training modules to empower employees with essential skills.

Key Expertise:

- **Multifaceted Career:** Over 15 years, Maury has been involved in marketing & promotions, bartending, audio/visual production, photography, video editing, and graphic design. Notably, his theme park photography job opened doors to opportunities for guiding and training others.
- **Customer & Guest Service Specialist:** Maury adeptly handles diverse customer inquiries, resolves issues, and maintains positive relationships with guests. His extensive background equips him to excel in any service-oriented environment.
- **Creative Visionary:** Beyond customer service, Maury brings a creative touch to his work. With a solid understanding of photography basics, he captures moments that resonate with viewers. Whether assisting customers or framing the perfect shot, Maurice combines professionalism with an artistic sensibility.
- **Commitment to Excellence:** Driven by a desire to make a positive impact, Maury continues to evolve professionally and creatively.

His dedication leaves a lasting impression on colleagues, clients, and trainees alike.
