

Timberline Solar™
Solar Roofing System

Energy independence
that's as attractive as it is effective.

■ **Timberline Solar™** Shingles are an integrated roofing system, created by roofers, which delivers:

Aesthetics

Easy Installation

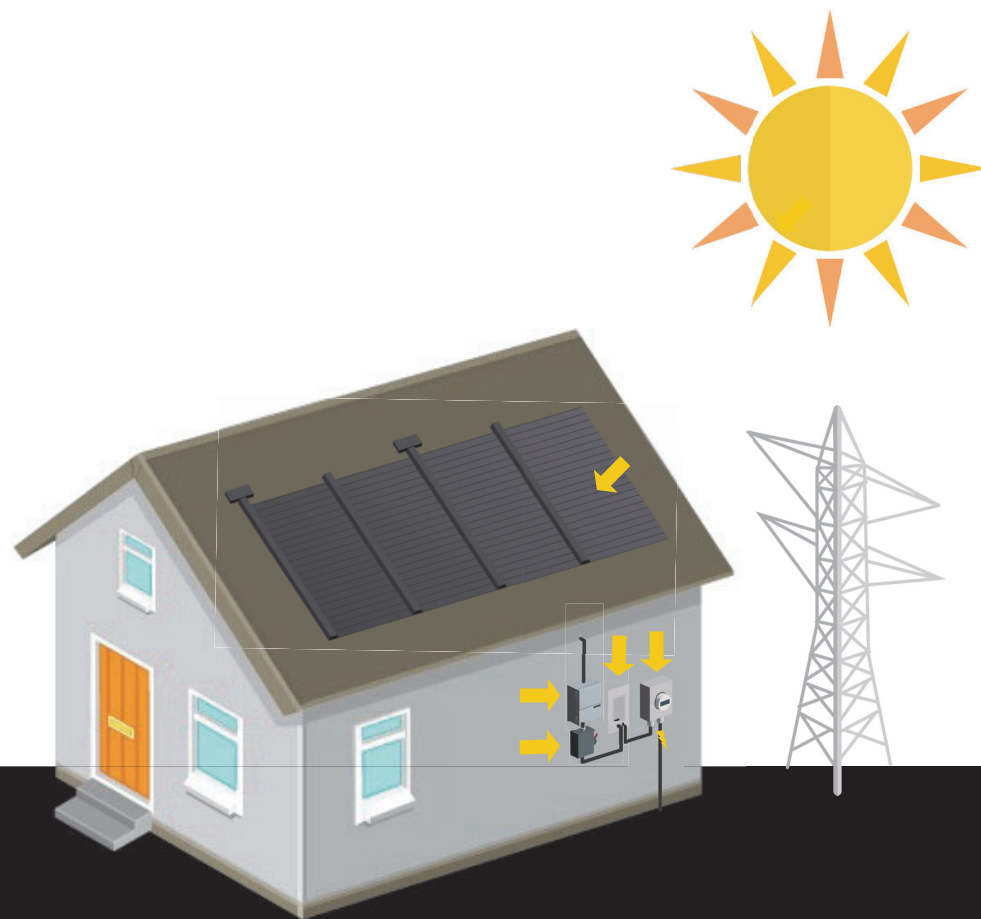

Competitive Pricing

■ The **Timberline Solar™** system

Take control of your energy and financial well-being

How it works:

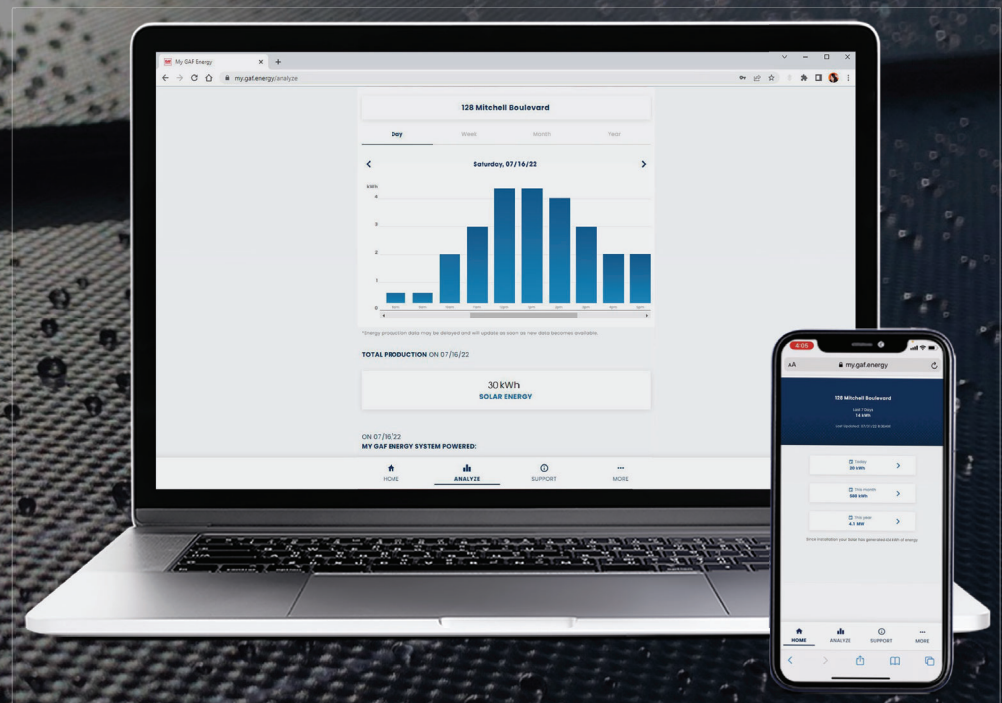

1. GAF Energy Solar integrated into your roofing system
2. Inverter
3. Disconnect
4. Panel
5. Net Meter

■ TURN YOUR ROOF INTO AN ENERGY-PRODUCING ASSET

Produce your own power. Lower your electric bill and help your home rely less on your local utility. Over time, **Timberline Solar™** can pay for itself by saving you money on your monthly electric bill.

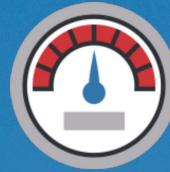

* Savings will vary and are not guaranteed

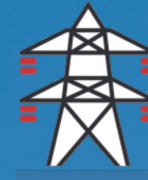

THE ECOSYSTEM

GAF Energy solar uses sunlight to produce electricity to power your home

The more electricity you produce, the less you purchase from the utility company

If your system generates more electricity than you need, energy can be sent to the grid. In exchange, credits to your bill can be used to offset the cost of electricity that you buy from the utility.

■ **Timberline Solar™** Shingle Systems eliminate the trouble zones that often come with traditional solar

Aside from aesthetics, traditional solar creates issues homeowners would rather avoid:

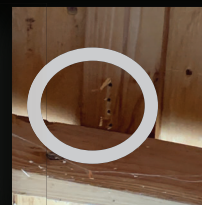

- Gaps between roof and panel can often create space for invasive wildlife habitats
- Improper installs often involve unwanted roof penetrations that damage your home

TRADITIONAL SOLAR PANELS

INVASIVE WILDLIFE

UNWANTED ROOF PENETRATIONS

■ Unlike traditional solar, **Timberline Solar™** comes in a variety of shingle colors

**PUT THE FEDERAL SOLAR TAX CREDIT
TO WORK FOR YOU.**

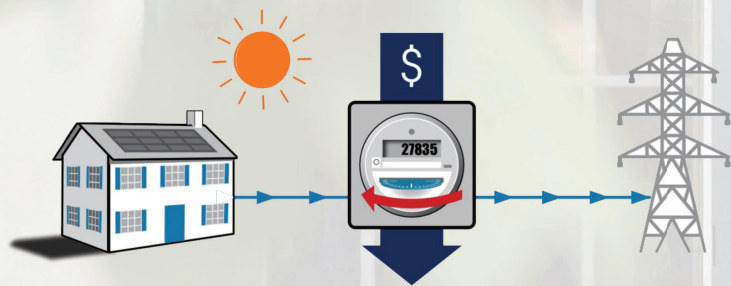

Ask your tax advisor to show you how.

Timberline Solar™
Solar Roofing System

A photograph of a house exterior with a window and utility boxes. The window has a dark green frame and is partially obscured by out-of-focus green leaves in the foreground. To the right of the window, three utility boxes are mounted on a light-colored stucco wall. The largest box on the left is a GAF Energy solar inverter, featuring a red logo. To its right are two smaller grey boxes, likely for gas and water service, with warning labels. Metal pipes and conduits run vertically and horizontally between the boxes. At the bottom of the frame, there are some small green plants and a bare, brown shrub.

**■ TAKE CONTROL AND BEGIN
YOUR JOURNEY TO ENERGY
INDEPENDENCE.**

■ NET-METERING HELPS OFFSET THE COST OF ENERGY

Send energy back to the grid, earn credits to your bill

BUILD ENERGY INDEPENDENCE & AVOID THE CONTINUED RISING COST OF POWERING YOUR HOME

Over the next 25 years you can expect energy costs to increase on average 1.8% per year*. Many factors will affect that cost and could increase it even more year-over-year including:

- ▮ Fossil fuel pricing structure
- ▮ Economic climate
- ▮ Environmental changes

With a GAF Energy Solar Shingle system on your roof, you can lock in your energy plan for the next 25 years and take comfort in knowing you've made a sound decision to take control.

*Based upon EIA (U.S. Energy Information Administration) data. Average cost increase is national but will vary from state-to-state.

■ PEACE OF MIND WITH OUR SOLAR MAX WARRANTY
