

Introduction to the eNanoMapper Ontology

Luke Slater

PhD Student - University of Birmingham

Overview

- Introduction
- What the eNanoMapper ontology is designed to achieve
- How the ontology is designed
- What it's used for
- How to access and browse it

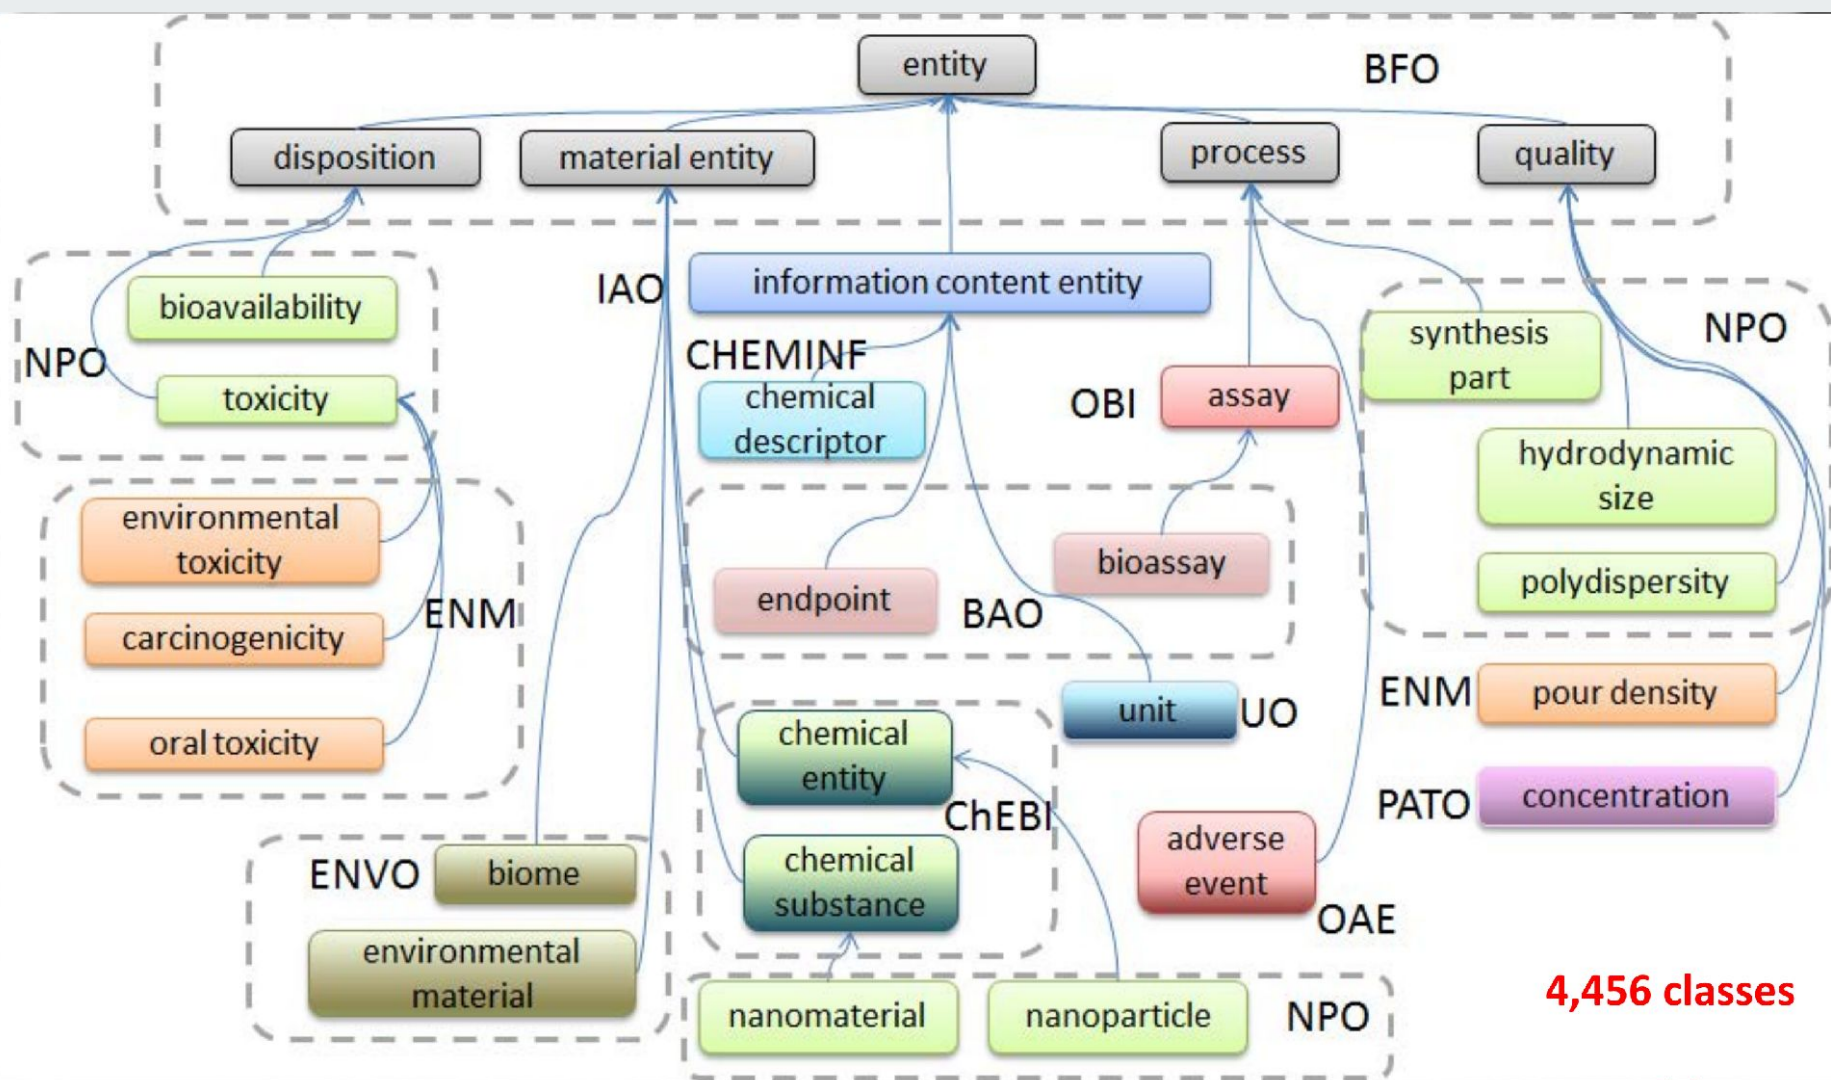

eNanoMapper Objectives

- A complete ontology for the nanosafety domain
- Provide a terminology for the domain that exists sensibly in relation to other scientific domains
- Use this domain description to annotate data
- As we will see, this enables Good Things
- Ontologies of this kind are called Application Ontologies (another example is EFO)

eNanoMapper Design

- There are already many ontologies, which we may have just heard about: CHEBI, IAO, NanoMaterials
- The important thing is that we can clearly see that this exists in the kind of intersection of domains, along with its own information
- So, a wonderful tool called Slimmer has been developed to chop up pieces of ontologies and include them into our own.

eNanoMapper Uses

- Browsing and searching terms in the ontology
- Annotation of data with ontology terms
- Semantic data lookup and search USING the ontology and annotated data
 - E.g. semantic pubmed searching for conceptual information
- Data science: logical inference, semantic similarity
 - Examples for where this approach has been applied is most obviously, functional similarity for prediction of protein-protein interactions, genetic orthology, etc

How to Browse The Ontology

- There are many tools providing an ontology interaction interface. On the web, these include BioPortal and AberOWL. On the desktop, mainly Protege.

Details

Acronym	ENM
Visibility	Public
Description	The eNanoMapper ontology covers the full scope of terminology needed to support research into nanomaterial safety. It builds on multiple pre-existing external ontologies such as the NanoParticle Ontology.
Status	Beta
Format	OWL
Contact	Haralambos Sarimveis, hsarimv@central.ntua.gr Egon Willighagen, egon.willighagen@maastrichtuniversity.nl Philip Doganis, filippos@mail.ntua.gr Friederike Ehrhart, friederike.ehrhart@maastrichtuniversity.nl Gareth Owen, gowen@ebi.ac.uk Linda Rieswijk, linda.rieswijk@maastrichtuniversity.nl Jiakang Chang, jkchang@ebi.ac.uk Janna Hastings, hastings@ebi.ac.uk
Categories	Chemical, Health

Tutorial: <https://bit.ly/2JqhMlf>

- The tree view on the left expresses the ontology classes, and allows you to browse through them.
- The Jump To text box allows you to search for classes.
- Remember each sub-item **is a** more specific kind of the thing above it (subsumption relationship)

Details Visualization Notes (0) Class Mappings (58) 

Preferred Name	citation
Definitions	a textual entity intended to identify a particular publication
ID	http://purl.obolibrary.org/obo/IAO_0000301
definition editor	PERSON: Lawrence Hunter
editor preferred label	citation
example of usage	Verspoor, K., Cohen, KB., Hunter, L. Textual characteristics of traditional and Open Access scientific journals are similar, BMC Bioinformatics 2009, 10:183.
has curation status	http://purl.obolibrary.org/obo/IAO_0000125
label	citation
prefixIRI	IAO:0000301
prefLabel	citation
textual definition	a textual entity intended to identify a particular publication
subClassOf	information content entity

- On the right, information about the class
- The ID is important for annotation
- Different ontologies have different tendencies towards what they include here

Thank you!
