Summary

The crew got an early start today. The forecast at JERC was very promising so we started the transit prior to solar angle so we could maximize time. After the long trek we arrived on station and were greeted by clearing skies. We collected almost the entirety of the airshed in 'green' sky conditions before the cumulus starting building. The clouds remained above flight altitude so we continued to collect in mixed cloud conditions. We used all available solar angle and complete both the P1 & P2 boxes with a fuel stop at nearby Thomasville, GA.
