Summary
A very low cloud ceiling over Boulder this morning delayed our transit by several hours. Once the ceiling lifted enough for take off we were able to fly in mixed IFR conditions to Amarillo, TX. We were able to stay under the clouds during the second leg of the journey, and finally arrived in Wichita Falls, TX in the evening.

Concerns
None.

Comments
- Due to the difficult nature of weather conditions for this transit, the vacuum pump was added to the packlist at the last minute in case re-pumping is needed.
- The system was off for an hour and 18 minutes to allow IFR flight. NIS chamber pressure remains at adequate levels for now, having increased from 2.25E-7 to 3.37E-7.
- Klemme Range (OAES) was previously first priority for D11 collection; however it is still well outside of peak greenness and has been moved to lowest priority.
IFR conditions began to clear shortly after clearing the Boulder area. Photo by Elissa.
