Summary

While starting the pumping process of the spectrometer last night, it was discovered that the system was not powered off long enough for the focal plane array to reach ambient temperature. With the first decent flight day not forecasted till Tuesday and over 60 days till the next time the NIS will be warmed, the decision was made to let the NIS continue to warm under vacuum pressure in order to reset the blue quantum efficiency shift in the Focal Plane Array. Cooling should commence later tonight.

Concerns

Telemetry alert emails are not currently being sent due to an email server issue. This will most likely not be fixed till Monday.

Comments

Hotel Kit was set up and RAID 2023_P1C1_03 formatted.
