WOLFMIX - STANDALONE DMX PERFORMANCE CONTROLLER

The Nicolaudie Group, manufacturers of DMX lighting software and hardware including Light Rider, Daslight and Sunlite introduce a new brand focusing on fully standalone devices.

The W1 is the first controller from Wolfmix and has been specifically designed for creating light shows on the fly without a computer. Aimed at the disco, club and live performance markets and with a design based on DJ and electronic music hardware, Wolfmix W1 includes a toolbox of FX modules, music sync, and up to 4 DMX universes - packed inside robust hardware with a powerful processor. Choose from 1000's of light fixtures, or build fixtures directly inside the controller.

Wolfmix W1 will be available from around Q2 of 2021. Pricing and availability will be announced in due course.
