

MINIMUS HARD FESCUE

Festuca brevipila

DESCRIPTION

Minimus Hard Fescue offers several options on the golf course and in general, natural low maintenance turf areas with A-LIST quality. It thrives in low maintenance management and is ideal for meadows, parks and secondary roughs, as well as in areas where turf transitions to natural areas or into shade. With low fertilizer and water inputs, a mowing at the seed head extension period (mid-May – mid-June) is often the only mowing required. Minimus is excellent for use in mixtures with wildflowers and native grasses. With low seeding rates, Minimus will not form super dense and heavy thatch sod and will not out-compete other desirable species.

APPLICATIONS

Golf courses, secondary roughs,
meadows, parks

Sun and shade mixtures for lawns
and golf course roughs

GEOGRAPHICAL ADAPTATION

Cool-season and transition zones
including higher elevations of the
southeast and arid regions with a
minimum of 16 inches annual rainfall
per year

PRODUCTION AREAS

Pacific Northwest

SEEDS PER POUND (approximate)

565,000

FEATURES & BENEFITS

Reduced fertility requirements

Reduced water usage

Reduced mowing frequency

Great for environmentally sensitive sites

Excellent shade tolerance

Proven, dependable, and adaptive

SEEDING RATE (pounds/1,000 ft²) *

Overseeding: 1-3

New Seeding: 0.5-4

*local conditions vary and dictate rates
