

VERGE

Pollinator Lawn Mixture

DESCRIPTION

Verge Pollinator Lawn Mixture is a low-growing minimal water use lawn alternative that provides ascetic beauty, shelter for pollinators, and an ecological carbon bank for your homescape. The mixture features several low growing, fine textured, cool and warm season grasses that combine with various yellow, orange, pink and white flowers creating a resilient lawnscape built for the 21st century.

INFORMATION AND TIPS

Seeding Rate: 2 lbs per 1,000 sq ft

Seeding Depth: 0.25"

When to Plant: Fall/Spring or Summer with irrigation

Watering: Keep seedbed moist until fully germinated, then reduce to watering during extreme drought

Seeds/Pound: ~460,000

Germination: 5-14 Days

Height: Mow at 6"-8" (*higher if left unmowed*)

Mixture Components: Native Red Fescue, Blue Grama, Poppies, Baby Blue Eyes, Yarrow, misc other cool season grasses and wildflowers

BENEFITS

- Increasing Pollinators to improve environment
- Reduction in labor with no mowing or greatly reduce mowing 2x/year
- No fertilizer or herbicides required
- Reduction in irrigation/water use
- Increases Oxygen, reduces CO₂ and Carbon footprint
