

MINIMUS HARD FESCUE

Festuca trachyphylla

DESCRIPTION

Minimus Hard Fescue offers several options on the golf course and in general, natural low maintenance turf areas with A-LIST quality. It thrives in low maintenance management and is ideal for meadows, parks and secondary roughs, as well as in areas where turf transitions to natural areas or into shade. With low fertilizer and water inputs, a mowing at the seed head extension period (mid-May – mid-June) is often the only mowing required. Minimus is excellent for use in mixtures with wildflowers and native grasses. With low seeding rates, Minimus will not form super dense and heavy thatch sod and will not out-compete other desirable species.

APPLICATION

Golf courses, secondary roughs, meadows, and parks

Sun and shade mixtures for lawns and golf course roughs

SEEDS PER POUND

~565,000

GEOGRAPHICAL ADAPTATION

Cool-season and transition zones including higher elevations of the southeast and arid regions with a minimum of 16 inches annual rainfall per year

PRODUCTION AREAS

Pacific Northwest

FEATURES & BENEFITS

- Reduced fertility requirements
- Reduced water usage
- Reduced mowing frequency
- Great for environmentally sensitive sites
- Excellent shade tolerance
- Proven, dependable, and adaptive

SEEDING RATE

Overseeding:

1-3 lbs/1,000 sq ft

New Seeding:

0.5-4 lbs/1,000 sq ft

Local conditions vary and dictate rates
