New Feature Announcement

Expands the value of StaffReady's Scheduling Module

SCHEDULE OBSERVERS

➤ Allow users to view multiple schedules but not edit them

➤ Provides increased transparency between departments and Enterprise-level management review

➤ Precludes the need for separate login credentials used solely for viewing other schedules.

➤ Ideal for employees that are shared between departments.

Case Example: Maria is the Scheduling Admin in a busy 30-person department. She sets up the lead from another department, Emma, as a Schedule Observer with the option to view unpublished schedule information. Before the schedule is published, Maria has Emma review the schedule for any issues before it is published.
