

nodefoundry.ai

Layer-2 protocol for AI and DePIN

Summary

- **Problem:** There are 10,000+ Crypto-AI agents and 100+ DePIN networks with negligible usage. This makes them hard to discover, use, and transact.
- **Target : web3:** DePIN + AI associated networks ~ \$2Trillion; projected to reach \$5Trillion by 2030.
- **Our solution:** Providing an aggregation and abstraction layer, making it easy to use decentralized AI compute infrastructure and crypto-AI agents.
- **Our thesis:** Decentralized AI will grow 10x over the next 5 years and everything in the world will be AI enabled; Nodefoundry will become the gateway for all things DePIN and AI.
- **Team:** World class team of ex-EY, Consensus, Ledger, p2pfoundation from Canada, Dubai, Tel-Aviv, India, Singapore. Collectively bringing 30+ years of crypto experience.
- **Ask: We are looking to raise \$5million** on a private token sale to scale and grow Nodefoundry to a billion users. TGE in Q2 2025.

Crypto-AI and DePIN suffer from an adoption problem

Growing demand for LLMs and Humanoids is driving demand for compute and AI. Crypto AI needs ease of use and price discovery to reach a billion users.

1

Fragmented ecosystem:

100+ DePIN networks; 10,000+ AI agents. Hard to discover the right network for use cases without an abstraction layer.

2

Bad UX:

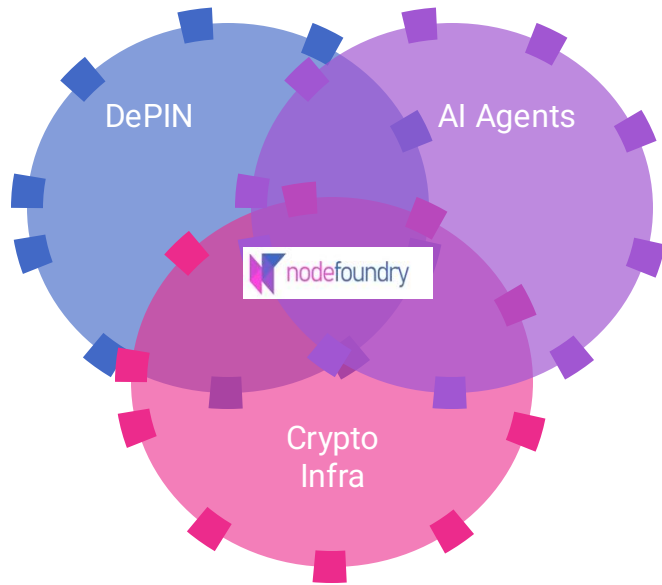

Crypto complexity of wallets/tokens/chains excludes 90% of AI developers.

3

Price discovery:

Decentralized platforms cheaper by ~25% than centralized systems, but Token payments and token liquidity add tx costs + complexity.

A Trillion dollar market that needs ease of access

At the confluence of three significant markets that will collectively see over \$3 trillion in growth over 5 years.

- DePIN market cap has been growing exponentially and projected to be \$5 trillion.
- AI Agents are worth ~\$500 billion in 2025 and expected to grow at a CAGR of 50% till 2030.
- AI user base to reach 1 billion and 70% of businesses poised to use AI in the next 3-5 years.
- 500 million crypto wallets today and ATH reached for most tokens, potential for 3 billion wallets in 5 years.

Our solution: Crypto-AI, without the complexity

Nodefoundry's abstraction and aggregation layer integrates 100+ DePIN providers, 100s of data providers who provide data to train AI models, and 10,000+ AI agents in an easy-to-use platform to discover, train, transact, and use crypto-AI.

Discovery: Easily find and deploy on 100+ DePINs, use data sources to train models, use 10,000+ crypto-AI agents

Web2 + Web3 onboarding: Sign in with socials/wallets; one click payments; Drag and drop UX for agent and dePIN usage + discovery.

Multiple use cases: CDN, Video rendering, storage, custom AI agents, running AI models.

Product overview

Nodefoundry is the gateway for web2 and web3 users to discover, transact, and use crypto-AI agents and infrastructure.

Efficient Discovery

100+ DePINs and 10,000+ AI agents in a centralized, easy-to-use platform.

New Users Unlocked

Simplified options for the next billion users from web2 & untapped markets.

Omni-Payment Channels

Simplified sign-ins, payments via fiat channels, stables, and tokens.

Privacy

Unified privacy layer to provide sovereign ownership to end-users.

Multi-Use Marketplace

Content, compute, video rendering, storage, custom AI agents, LLMs.

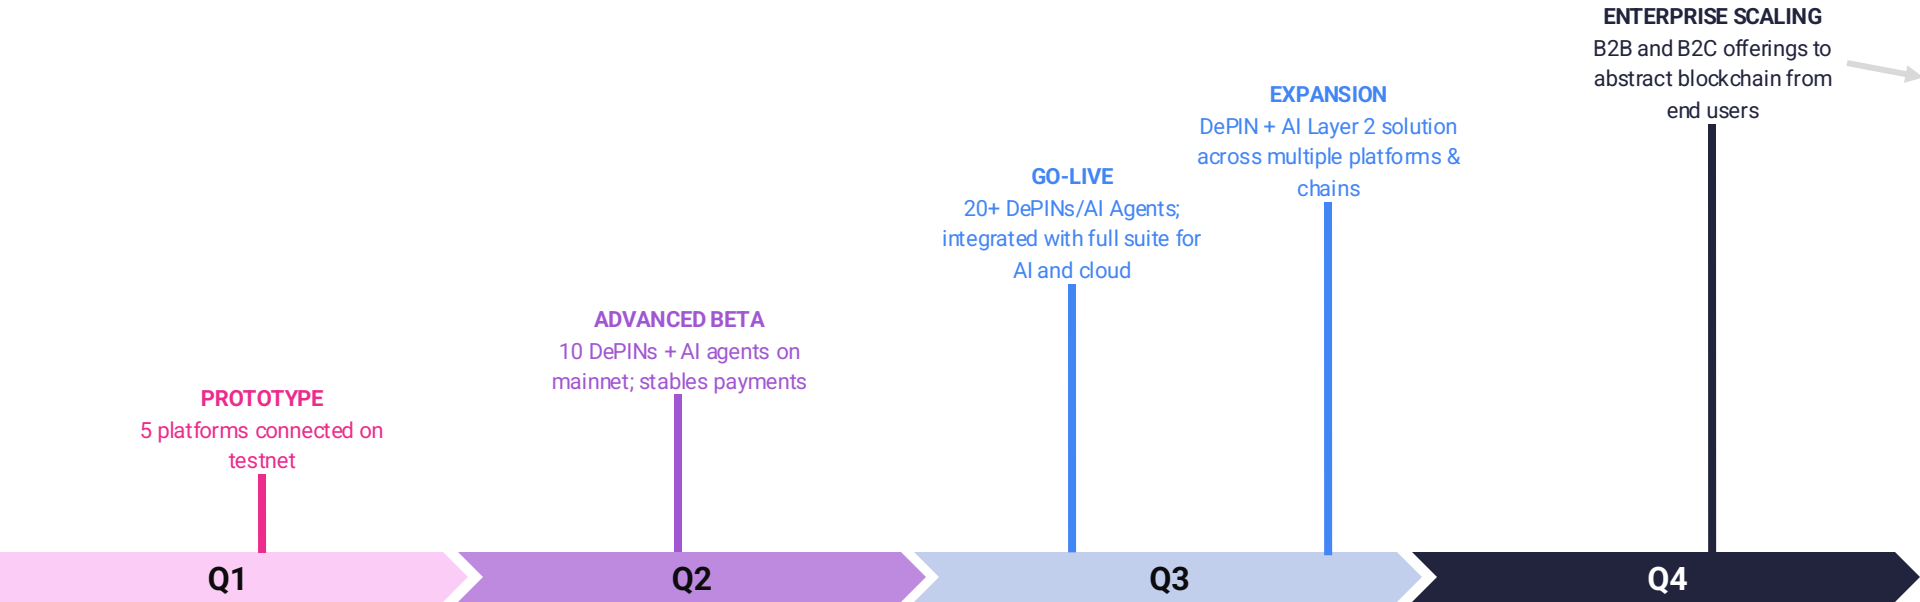

Simplicity

Simplified sign-ins with wallet and socials.

Roadmap

Mission: Take Nodefoundry from Beta to a highly profitable company; be a gateway to all things AI

Financials, fundraise, and growth

Nodefoundry is raising \$5 million in a private token sale, with a Token Generation Event (TGE) in Q2 2025.

Scalable, usage-led revenue model
