

Crystal Clean

Carbonized CIP Cleaner/Degreaser

North Woods® Crystal Clean was dynamically formulated to rapidly and safely solubilize heavily carbonized, tar like substances, found in smokehouse and oven related applications without the generation of damaging foam that causes pump cavitation failure.

Used alone it provides fantastic results, without harsh fumes, lung damaging mists, or noxious odors. If coupled with ozone, it provides an unprecedented level of performance and sanitizing action never before seen in a CIP smokehouse cleaner - while reducing BOD, COD, and waste water surcharges.

Crystal Clean performs at its absolute best when run through CIP misting equipment - providing unparalleled economy, almost instant saponification of heavy grease and oils, reduction of water usage, free rinses, while leaving equipment sparkling clean. It cleans better with each passing usage by reducing caustic residues that allow for protein binding.

DIRECTIONS FOR USE

Dilution is controlled by many variables such as soil type and load, pre-rinse quality, and length of wash cycle. 1-3% is generally a good start. Run cleaning cycle according to your SSOP.

Crystal Clean performs optimally at temperatures of 165°F or below, which greatly saves on energy and prevents protein baking.

*While generally considered safe on any surface not harmed by water, we recommend not using it on aluminum or other soft metals.

BENEFITS

- High performance carbonized CIP cleaner
- Non foaming package clings to vertical surfaces for increased cleaning action, while not producing damaging pump cavitating foam
- Extremely economical to use. Generally speaking, start with 2/3 of normal product use and time for great results
- Free rinsing for sparkling clean surfaces and greatly reduced water rinse times
- Breaks down protein bluing on stainless surfaces, while removing caustic chalk to make future cleanings more productive
- No harsh caustic fumes, lung damaging mists or noxious odors
- Provides rapid saponification of tough grease, oils, and tar like soils
- Unique surfactant laden formula reduces overall caustic content
- Crystal Clean will not attack stainless nor degradate concrete infrastructure
- Greatly reduces labor, time, and water
- Fragrance free
- Biodegradable
- Continued use increases results
- Ozone compatible for unparalleled performance
