

THE PROMISE TO THE UNDERWRITER

Get faster to **NO**. Get to **YES** more confidently.

Anthropic ships breadth. **OloLand ships depth.**

Deal teams underwrite under time pressure. Big-4 QoE quotes can't be justified pre-LOI; general AI tools produce confident-but-unverifiable prose. **OloLand is the underwriting control system — every claim sourced, every number reconciled, every decision auditable.** Kill bad deals at \$99 in 72 hours. Defend the good ones in IC with citations on every figure.

WHO FEELS THE PAIN

Independent sponsors • family offices • private credit • middle-market PE • search funds • RWI underwriters • corporate development • investment banking. All underwriting under time pressure, with Big-4 QoE quotes they can't justify pre-LOI and AI tools that produce confident-but-unverifiable prose.

PAIN → BENEFIT

What our customers say. What we ship in response.

THE PAIN

"Can't justify a \$50–150K Big-4 QoE on a target we might walk from."

GET FASTER TO NO

Pre-LOI Forensic Screen at \$99 — Beneish • Benford • EBITDA bridge in hours. Full QoE at \$999 when the deal warrants the deeper read.

THE PAIN

"My AI memo sounds great but I can't defend the numbers to IC."

GET TO YES MORE CONFIDENTLY

Inline [N] citations with click-through to source PDF. Every claim traces to a document. Source hierarchy (CPA > tax > management > AI) printed on the output.

THE PAIN

"An LLM hallucinated a number and nobody caught it."

GET TO YES MORE CONFIDENTLY

Verifier stack as shipped code, not prompts. Deterministic engines do the math; the grader checks coverage; cross-doc reconciliation picks the higher-authority source automatically.

THE PAIN

"Compliance and regulators want to know how this answer was built."

GET TO YES MORE CONFIDENTLY

Regulator-export API + role-gated replay + OTel traces. Audit trail is institutional, not a chat log. Any prior decision can be reconstructed byte-for-byte.

THE PAIN

"Big-4 takes 4–6 weeks. We have 10 days to LOI."

GET FASTER TO NO

Forensic Screen turns around in hours. Full QoE in days. Kills bad deals before LOI dollars are spent.

THE PAIN

"Analyst judgment isn't captured. Risk reviews miss what the last deal taught us."

GET TO YES MORE CONFIDENTLY

Correction loop → DPO → per-tenant LoRA. 246-category risk taxonomy + cross-deal learning. Executed and rejected deals both train the firm's model.

THE THREE BENEFITS THAT CLOSE

Defendability. Speed at the right price. Institutional memory.

01 · DEFENDABILITY

Every number survives an IC interrogation.

Inline citations, cross-document reconciliation, source-hierarchy weighting, and deterministic engines — the memo is defensible end to end. Coverage grader blocks the output if it drops.

02 · SPEED AT THE RIGHT PRICE

\$99 kills bad deals before LOI dollars are spent.

Pre-LOI Forensic Screen replaces a multi-week, multi-K Big-4 engagement for the 80% of cases where Big-4 is overkill. Full QoE at \$999 for the deals that warrant deeper underwriting.

03 · INSTITUTIONAL MEMORY

Rejected deals make the firm smarter too.

Analyst corrections, deal history, and the firm's judgment compound into a per-tenant LoRA. Senior IP becomes a balance-sheet asset — not chat history that evaporates at session end.

LIVES WHERE ANALYSTS ALREADY WORK — CLAUDE COWORK

Three plugins. Zero new app. Meets the analyst inside their existing stack.

Financial analysts already run their day inside Claude Cowork — the desktop AI tool with plugins for Gmail, Slack, Apollo, Pitchbook, Notion, Box, and 100+ others. OloLand ships three Cowork plugins that surface our tools as slash-commands alongside the rest of their stack. **Install once. Invoke from any conversation. No retraining, no app-switching, no copy-paste between systems.**

PLUGIN 01 · DILIGENCE

ololand-dd

Full deal lifecycle — financial extraction, risk scoring, valuation, IC memo. **For deal teams running active diligence.**

/dd-analyze
/risk-report
/valuation
/meeting-prep
/talk-to-deal

PLUGIN 02 · PRE-LOI SCREEN

ololand-forensic-qoe

The wedge SKU. Seven-primitive battery at \$99/screen, 72-hour SLA. **For independent sponsors and corp dev triaging inbound deals.**

/forensic-screen
/beneish
/benford
/ebitda-bridge
/lapping-check

PLUGIN 03 · COMPLIANCE

ololand-compliance-hooks

Always-on guardrails. MNPI guard, citation enforcer, provenance ledger, audit log. **For regulated PE LPs, RWI underwriters, compliance-bound IB.**

MNPI guard
Citation enforcer
Provenance ledger
Audit log
Regulator export

STACKS WITH Gmail · Outlook · Slack · Notion · Box · SharePoint · Apollo · ZoomInfo · Pitchbook · FactSet · S&P Capital IQ · Dalooop · Common Room · DocuSign · and any other Cowork plugin already in the analyst's stack. **M&A agents inherit from coding agents** — verifier loop, persistent state, deterministic engines, audit trail. The model is the analyst; OloLand is the harness.

THE MOAT — AND WHAT'S COMPOUNDING NEXT

Anthropic captures the session. OloLand captures the institution.

TODAY

Persistent state + permanent schema. agent_runs / spans / artifacts / corrections locked 2026-05-15. Models are replaceable engines.

Verification stack as code. reconcile_documents, run_beneish, run_lbo_model wired to the grader — not a prompt.

Publishing discipline. Forensic-mode extractor pattern; outputs survive regulator scrutiny.

Per-tenant LoRA flywheel. Firm-tier unlocks DPO on the tenant's own corrections; switching cost compounds.

Distribution ≠ substrate. Cowork & Claude Code plugins, Managed Agents, Agent Engine — channels into the same system of record.

COMPOUNDING NEXT · 90 DAYS

Firm playbook memory. Promote analyst_corrections from per-deal rows to durable firm-wide conventions (WACC bands, IC voice, comp-set bias).

Partner sign-off gate. Explicit Partner-role checkbox on regulator-export and final IC memo PDFs — closes the RWI & LP audit ask.

Tabular citation review. Every claim in a row; accept / reject in bulk. Sweep a memo's citations in two minutes.

Visible Plan → Work → Review. Three-pill progress at the top of the assistant. Analysts trust what they can see being planned.

ON THE ROADMAP Ethical-wall enforcement at deal scope · deal-type templates (SaaS DD first) · similar-deals panel on every new deal · atomic forensic skills for sharper routing.
