

# AOP-DB: The Adverse Outcome Pathway Database

Holly M. Mortensen, Ph.D.

US EPA, Center for Public Health and Environmental Assessment

Office of Research and Development

EPA Disclaimer: The views expressed in this presentation are those of the author(s) and do not necessarily represent the views or policies of the Agency.

OpenRiskNet Final Workshop, Amsterdam, October 23-24, 2019

# AOP-DB –What is it? Where can I get some?

Currently, the **EPA AOP-DB** is an internal SQL database

- *OpenRiskNet* Integration-Implementation Challenge Winner (!)
- AOPDB is an *AOP Profiling Tool* that allows for the biological context of each AOP to be explored.
- Originally created to **extract molecular information from the AOPWiki** into useable format
- The AOP-DB aggregates relationships between ***AOP-gene targets, chemical, disease, pathway, and species orthology information.***
- ***Long term significance and impact--*** Continued translation of AOP biological context, in real time from the AOP-Wiki, and the ability to associate these data between and across AOPs, and with assay, chemical, pathway and disease endpoints.

**This can help Risk Assessors understand what chemicals target the AOP, mechanistic steps involved in the outcome, and who is affected!!!**

## *Publicly Available Now:*

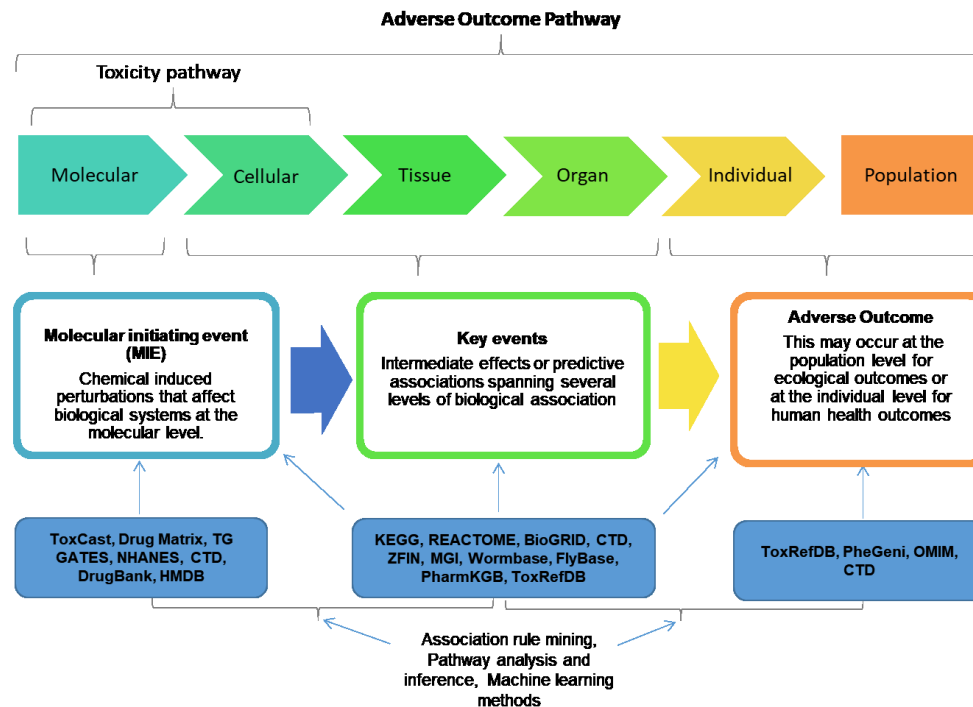

- AOPWiki → ToxCast Mappings via EPA CompTox Chemistry Dashboard
- OpenRiskNet Aop-DB RDF mapping

# AOP-DB –Why was it created?

Originally created with a dual purpose:

1. to characterize candidate AOPs for case study
  - a) Species applicability (*Pittman et al. 2018*)
  - b) Inter-individual Variation (*Mortensen, Chamberlin et al. 2018*)
2. To support the cp-AOPnet and putative AOP development (*Edwards*)

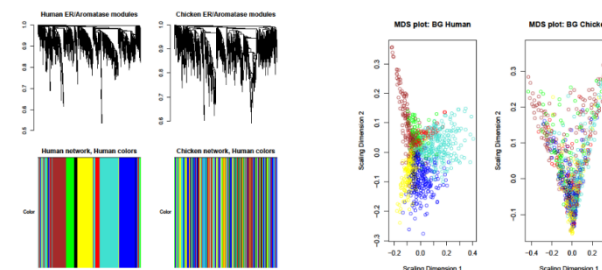

**\*\*General hypothesis generation tool to explore AOPs**

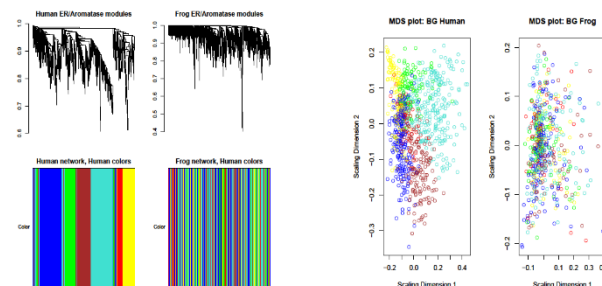

## Human + Mouse

## Human + Chicken

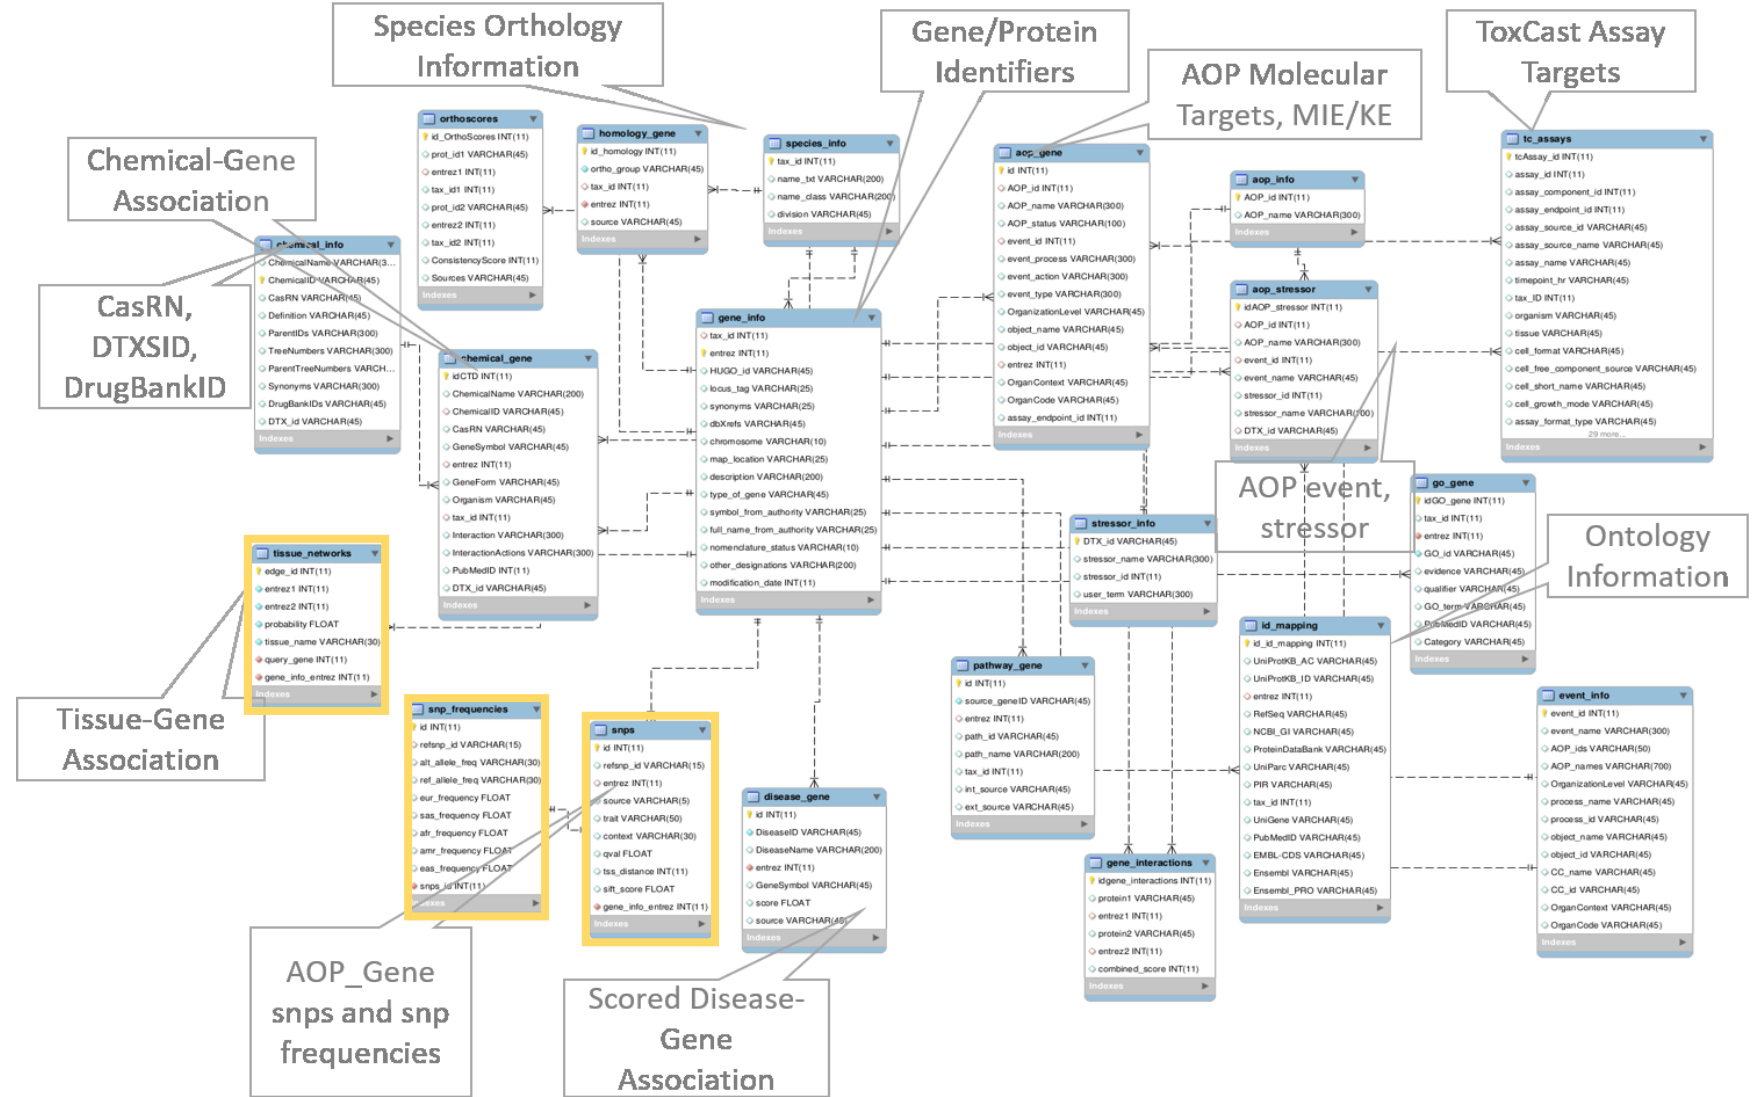

## Human + Frog

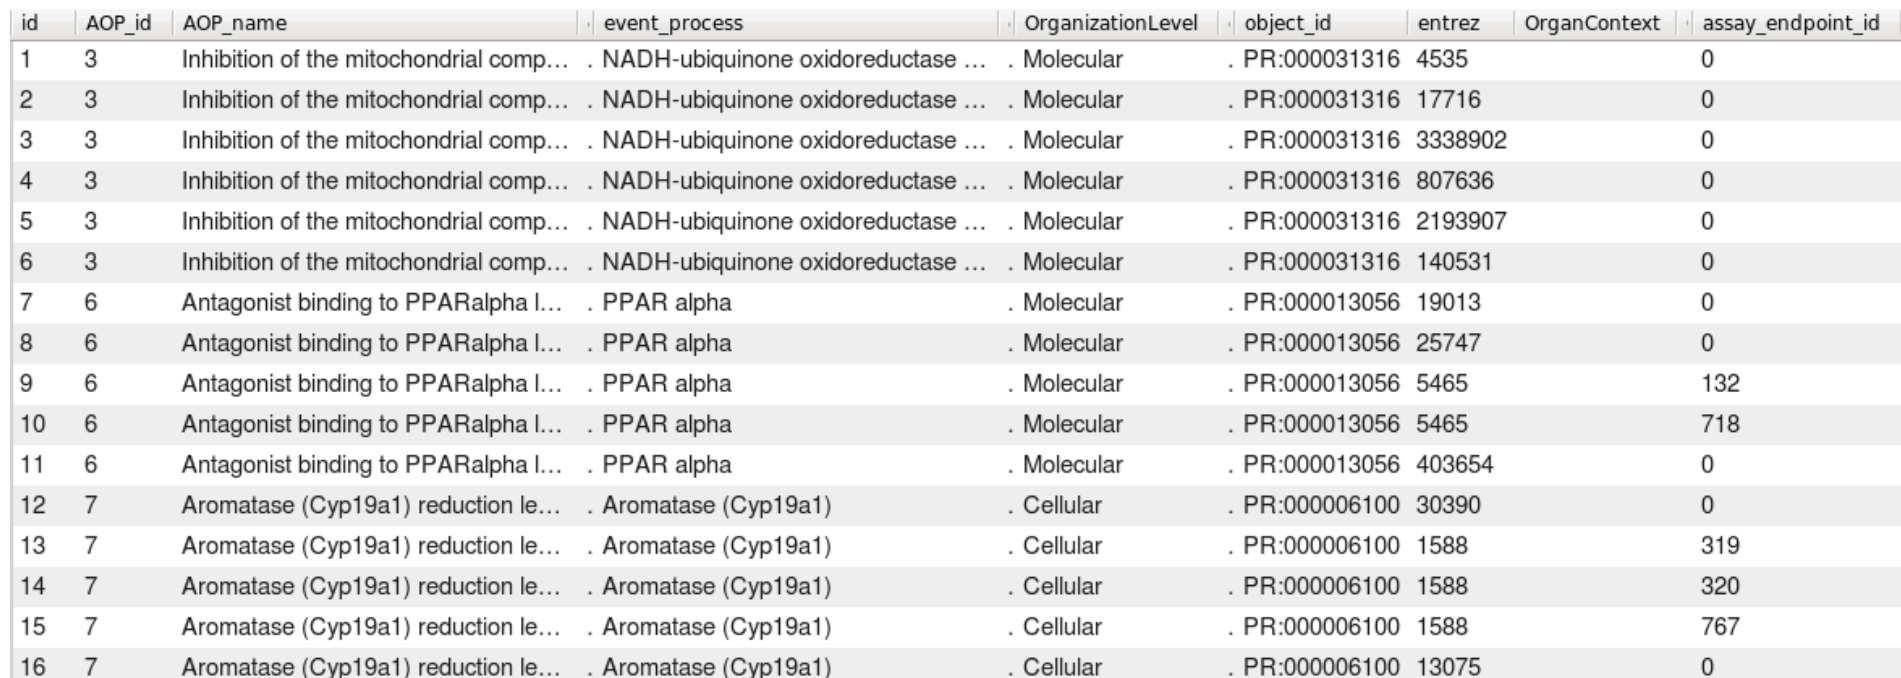

**ER/Aromatase expression module preservation**

Oki NO, Nelms MD, Bell SM, Mortensen HM, Edwards SW (2016) Accelerating Adverse Outcome Pathway Development Using Publically Available Data Sources. Curr Environ Health Rep. Mar 3(1): 53-63.

# AOPdb v.2 Schema

# AOP-DB v.2 Data Sources

## AOPdb v.2 Data Source Overview

Biological Category	Data Type	Count	Sources
Gene	Unique Genes	23189522	NCBI Gene
	Gene Interactions	580459027	STRING
Taxonomy & Orthology	Entrez Supported Organisms	24336	NCBI Taxonomy   Homologene
	Orthologous Groups	64502	KEGG Orthology   metaPhOrs
	Taxa supported by ortho groups	568	
AOP	Supported AOPs	236	AOP-Wiki
	AOP-gene targets	1312	
Chemical	CTD Chemicals	170646	CTD
	CTD Chemical-gene associations	1749648	
	ToxCast Assay	406	ToxCast
Pathway	Total Pathways	100594	KEGG Pathways   Reactome
	Inferred AOP-pathway associations	7606	ConsensusPathDB
Disease	Unique Disease IDs	24166	DisGeNET
	Disease-gene associations	628685	
Ontology	Unique GO Term IDs	26626	NCBI Gene
	Ontology-gene associations	204302	
Tissue	Total Tissues	145	HumanBase
	Tissue-gene interactions	17378250

# AOP-DB Update v.2

## **Updated GUI Frontend with search and download capabilities**

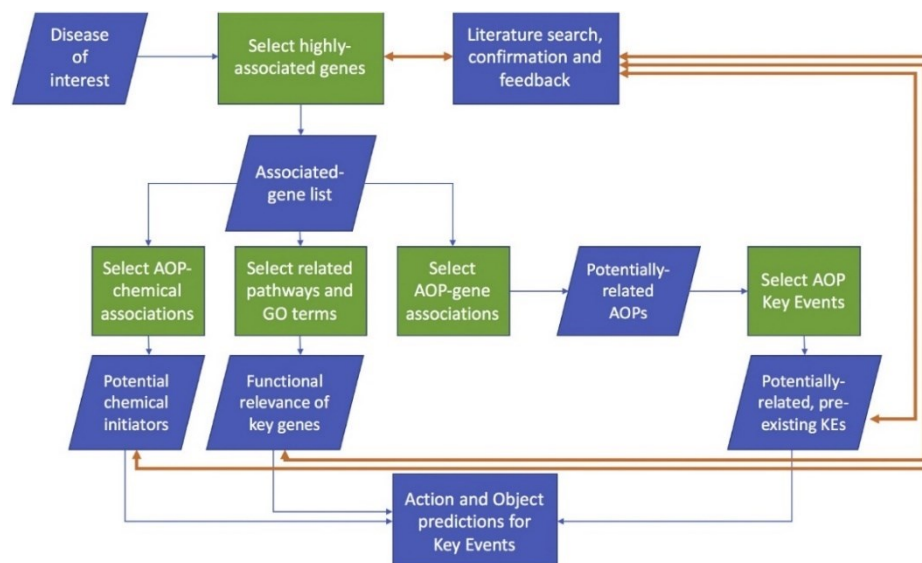

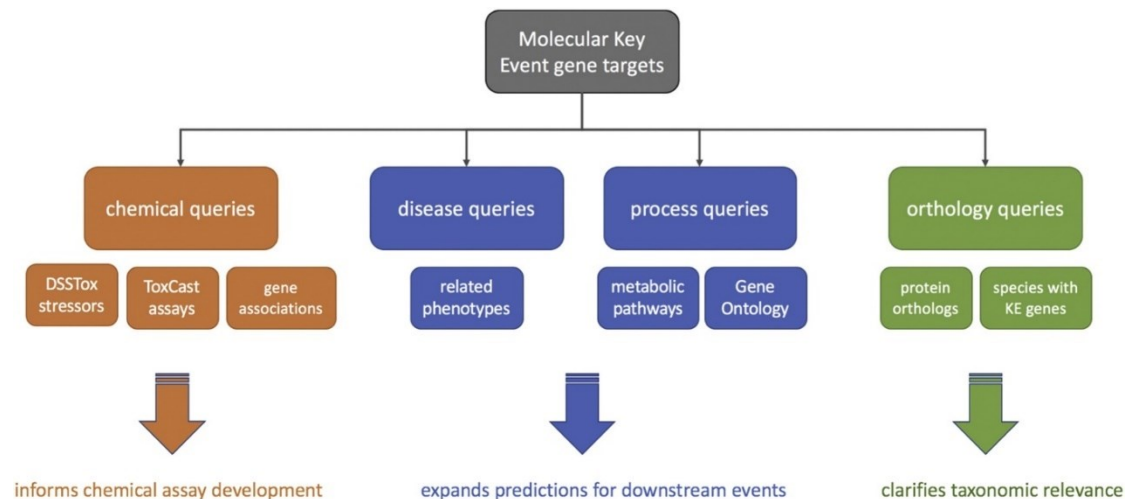

Code/Data updates include:

- Tools for directly modifying the DB; Automatic data pulls
- Data export in standard formats (eg. JSON/XML/CSV)
- Manual is in prep, including DB tutorial and changelog
- HumanBase Tissue Network integration
- Population frequencies for AOP-relevant SNP variants
- CP-AOP builder

Mortensen, H.M., Levey, T., Langley, P., Williams, A. *(in prep)* EPA AOP-DB version 2 updates.  
*Nature Scientific Data.*

# AOP-DB Use Case Examples

**Figure 1:**

# AOP-DB Use Case Example

## AOP-anchored Genetic Susceptibility

Chemical-gene associations for 3 AOP genes

- Increase expression/activity of CYP2E1
- Other interactions
- Non-TSCA workplan chemicals

### Step 1: Gene Set Selection

# Human Genes

### Step 2: Pathway Module Identification/Gene Set Validation

# Human Validated Genes

### Step 3: Identify regulatory regions for each gene (ENCODE)

Outcome related regulatory regions

### Step 4: Identify functionally significant SNPS (Ensembl/Gtex)

# Human functional, outcome related SNPs in each identified region

### Step 5: Population characterization (1000 Genomes)

Individual/Population level frequency data for functional, outcome related SNPs

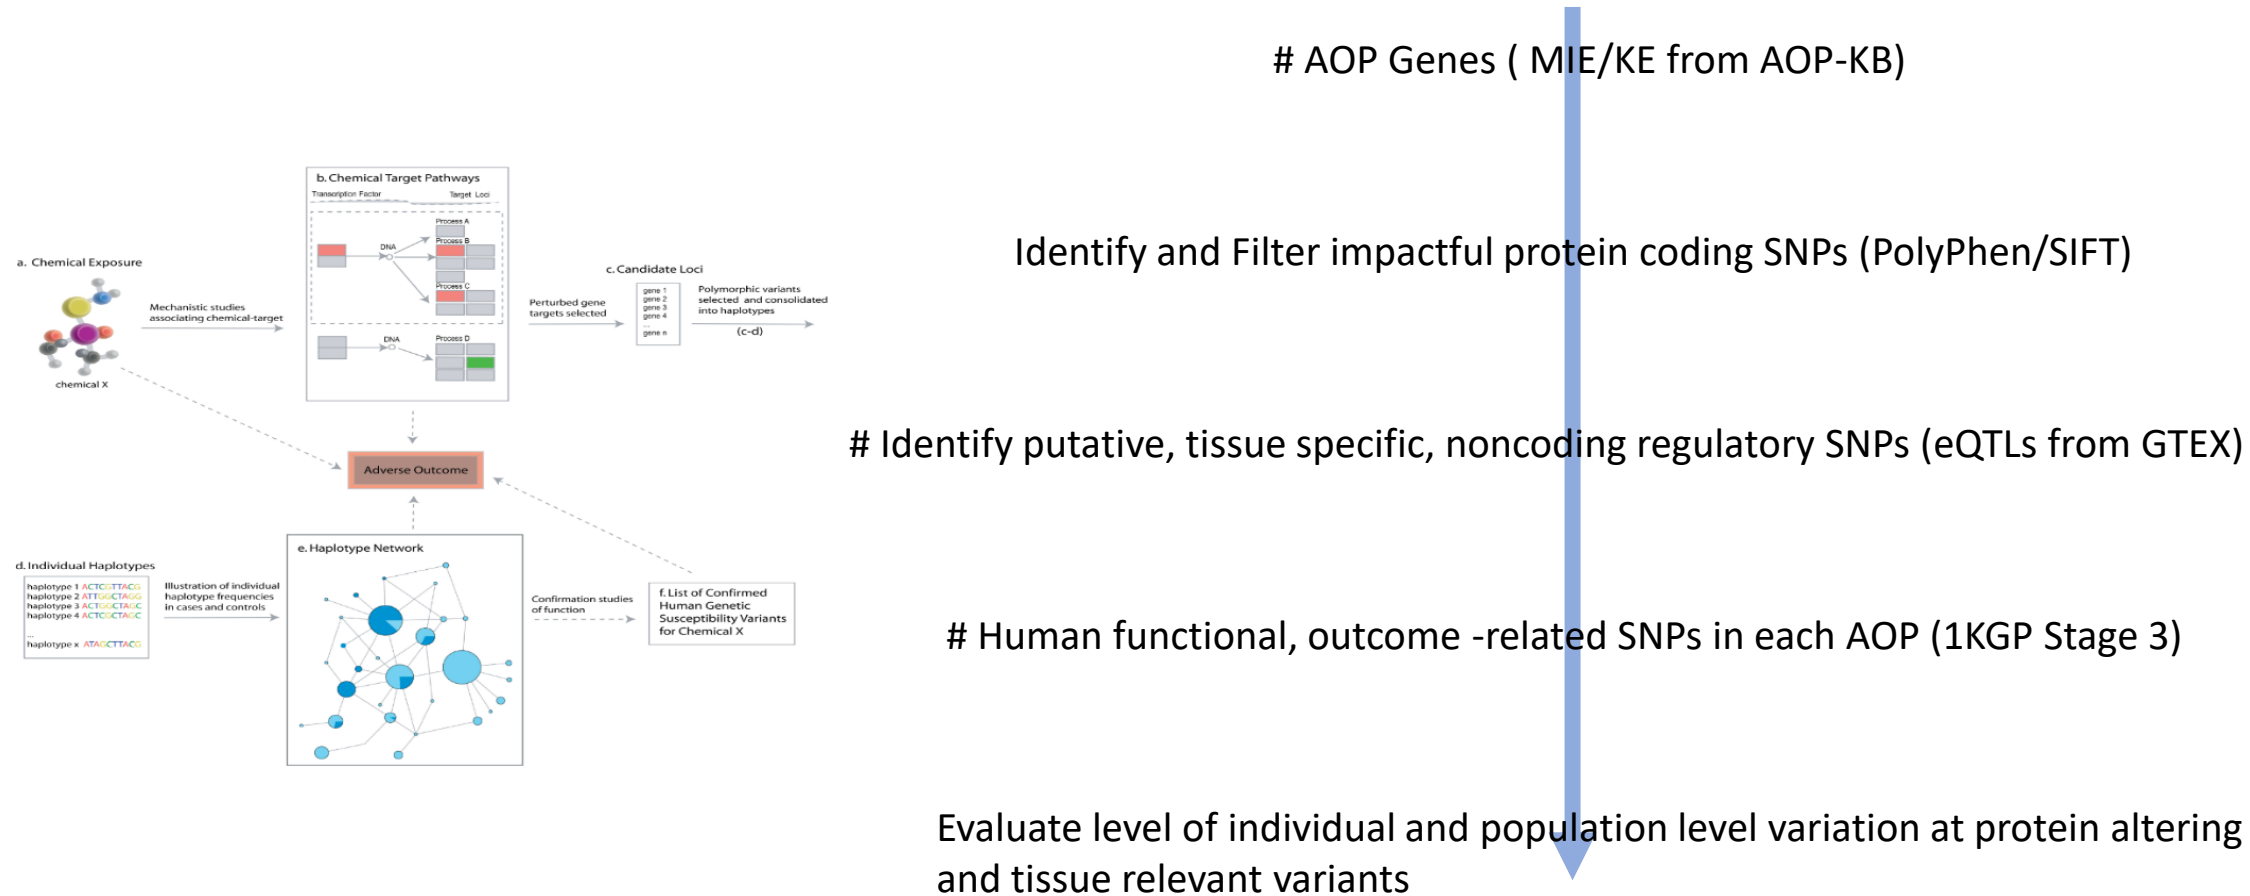

### Step 6: Outcome-specific Multi-genic characterization

FY17 Key HHRA Product: Mortensen, H.M., Chamberlin, J., Joubert, B., Angrish, M, Sipes, N., Lee, J.S., Euling, S.Y. (2018) [Leveraging human genetic and adverse outcome pathway \(AOP\) data to inform susceptibility in human health risk assessment](#). Mammalian Genome. Feb;29(1-2):190-204.

# cp-AOP Derivation

- Chemical-phenotype
- Chemical-disease
- Exposure-studies

Computationally predictive AOPs (cpAOPs)

- “Chemical-Induced Phenotypes at CTD Help Inform the Pre-disease State and Construct Adverse Outcome Pathways”

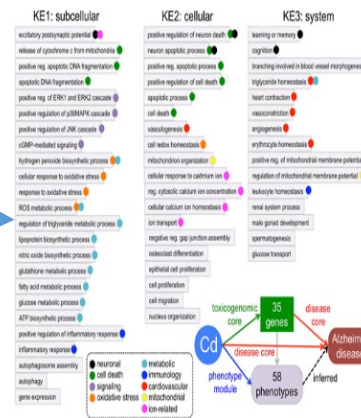

## Front End Tool

- Will guide the user through the cp-AOP building process adapted from the manual workflow in Davis et al.
- Selecting a chemical and a disease, a user can build an AOP
- Using built AOPs, we can gain insight on what AOPs people are searching for or studying
- This tool has the potential to increase AOP data richness in the AOP-DB

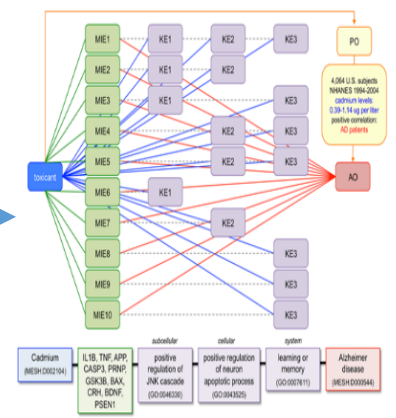

Select chemical and disease of interest

AOP	MIE	KE	AO	PO
	Molecular Initiating Event	Key Event	Adverse Outcome	Population Level
CTD	Toxicogenomic core	Chemical-Phenotype module	Disease core	Exposure module
No. Interactions	1,721,510	165,742	246,463	111,174
No. Chemicals	12,648	6,479	9,433	1,020
No. Genes	44,750	n/a	8,171	340
No. Phenotypes	n/a	3,919	n/a	300
No. Anatomy	n/a	766	n/a	n/a
No. Diseases	n/a	n/a	7,151	386
No. Taxa	577	215	n/a	1

Assign organization levels to computed key event phenotypes to build up AOP

Connect pathway from chemical to MIE to KE's to Adverse Outcome. Link to existing exposure studies.
