

Our signature solution - wibre™ is a wireless leased line alternative to fibre that can be installed in days, offers gigabit connectivity and keeps businesses connected in traditional broadband blackspots. This wireless leased line solution can deliver point to point, or diverse connectivity and has performance standards equivalent to a dedicated fibre leased line. Installation of our wireless leased line service can be achieved in as little as 7 working days, unlike the long and complex installation of fibre.

Benefits

- **Rapid installation** - wibre™ can often be installed within 7 working days, unlike traditional fibre, which can take months*
- **Ultrafast reliable internet connection** with dedicated symmetrical bandwidths available from 100Mb to 10Gb
- **Enables multigigabit connectivity** into businesses within traditional broadband blackspots
- **In-house specialist engineers** dedicated to providing seamless and hassle-free installation and ongoing support
- **Flexible and scalable bandwidth** upgrades to your service on demand
- **Independence** from traditional telephone exchanges and other fixed network operators

Solution specs

- mmWave technology operates via a direct line of sight, and it's narrow beam width of between 0.5 and 2 degrees is secure and doesn't suffer interference from other signals
- Supports secure transfer of data 256-bit AES encryption
- Intelligent radio management software ensure link stability and 24/7 monitoring
- Industry leading SLA matching fibre
- wibre™ is independent from traditional telecom exchanges
- Low latency, suitable for real time VoIP, video and other interactive services
