

managed network

Modern businesses need a well-managed and highly-available network infrastructure which should ensure your network is safe, available and performing as it should. Covering everything from firewall services to content delivery and load balancing whilst keeping it secure. We set up everything so that you can easily get on with your day-to-day activities whilst proactively supporting your network, and are always available to support your business needs. From ensuring your firewall is capable of providing for your bandwidth, to actively managing your company's WiFi network, we take care of everything.

Benefits

- Take full advantage of your superfast connectivity pipe, allowing it to flow to every device.
- Enjoy best in class hardware and all the benefits that come with it scalability, flexibility and uptime.
- Protect your users and your data with an Optimity managed firewall, complete with threat scanning and protection, application security and web filtering.
- Never worry about firmware updates. Everything is rolled out automatically by our team of highly accredited engineers, to ensure your network is operating at peak efficiency on the latest releases.
- Buying a managed service reduces the stress and workload of your IT team, allowing them to provide better service internally to staff and work on projects that benefit your business.

Solution specs
