## Holding Capacity\*

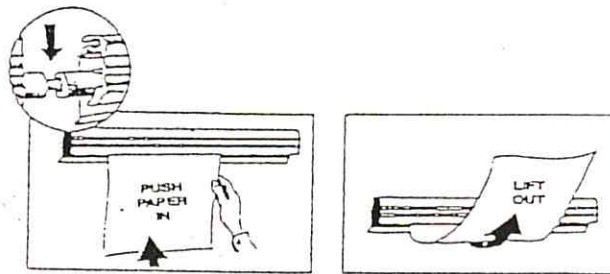

### Easy Release (ER)

**Usage:** The Easy Release is provided with interlocking rollers that have a reduced gripping power designed for frequent use. It holds paper up to 1/8" thick. Paper is removed by lifting it upwards. The rollers will release when the paper becomes taut.

**Application:** Easy Release rollers will hold single sheets of paper and most paper materials. It is recommended for use in schools or offices where the majority of materials displayed are of a thin, light material -- up to 20 sheets.

**Characteristics:** This model can be identified by the white rollers inside the extrusion. Available in Satin and Bronze finishes.

**Illustration:**

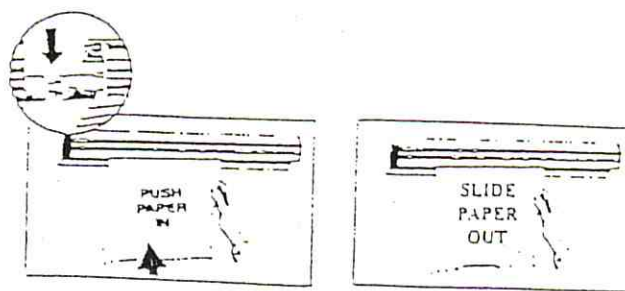

### Firm Grip (FG)

**Usage:** The Firm Grip is provided with interlocking rollers that have a high degree of friction for holding very heavy or multiple posters. It holds items up to 1/8" inch thick. Due to the extra gripping power, the material to be removed should be grasped near the top, sliding it sideways and downwards, as illustrated.

**Application:** This style is recommended for displaying heavy, slick materials, such as laminated paper, vinyl or plastic, or in areas where draft can vibrate the material. Large signs, posterboard and banners work well with the firm grip.

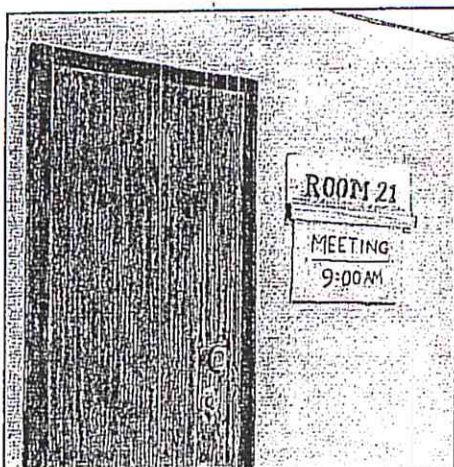

**Characteristics:** This model can be identified by the black rollers inside the extrusion. Available in Satin and Bronze finishes.

\*Please specify the holding capacity when placing your order.

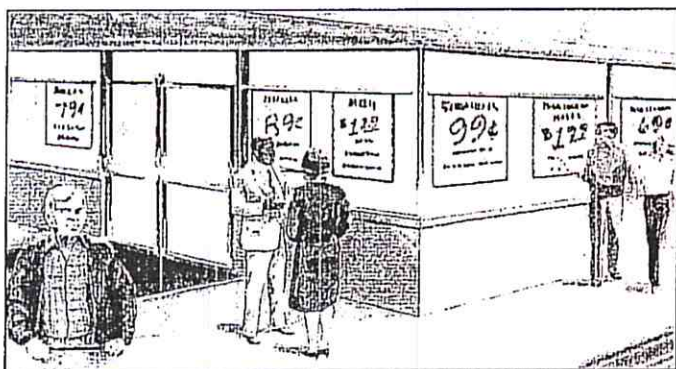

• Grip-a-Strip is perfect for incorporating into existing office signage. • Provide a permanent display space for meeting notices. • Post the day's agenda for your conference in a convenient location. • No more taping or tacking signs on doors or walls.

• Provide a simple, attractive way for signs to be displayed throughout the store. • The signs can be easily changed, but Grip-a-Strip lasts and lasts.

• Stop rigging signs in the front window! • No more wasting labor to scrape tape off windows from signs removed long ago. • Install Grip-a-Strip at the top of the windows, and post your specials quickly. • Changing signs takes seconds!

## CHOOSE THE ROLLER SYSTEM TO MEET YOUR NEEDS:

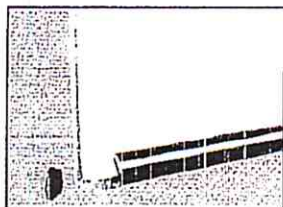

**EASY RELEASE** is provided with interlocking rollers with normal gripping power design for frequent use. Paper is removed by lifting it upwards. It is recommended for use with uncoated papers and materials made of a thin, light material. (White rollers.)

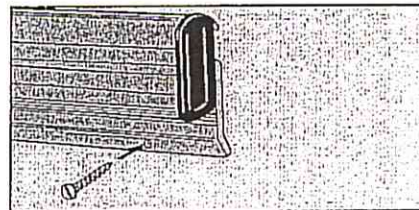

**FIRM GRIP** is provided with interlocking rollers that have a high degree of friction for holding signage. Items are removed by sliding them sideways. This holding capacity is recommended for displaying heavy, slick signage or where a draft can vibrate the material. (Black rollers.)

## ANCHOR PIECE

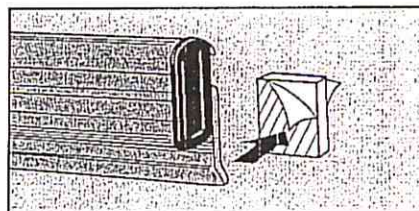

The anchor piece does not attach to any surface, but has a uniquely shaped spine encased with a metal profile. The plastic spine fits into the bottom of the sign, and then slides into the metal profile. The piece provides weight serving as a ballast to hold signs taut. Available in sizes from 6" to 144" (12 feet). Two finishes include: Satin and Bronze.

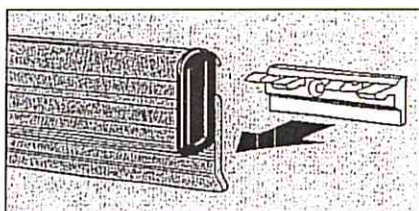

## SELECT THE MOUNTING OPTION TO MEET YOUR SPECIFIC NEEDS:

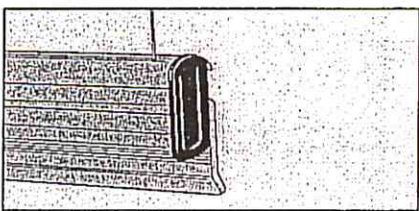

**SCREWS** - Holes can be pre-drilled in the front flange. Use tamper proof screws to mount permanently on walls or doors.

**PERMANENT TAPE** - Double-sided Foam Tape or Window Tape (*extra charge applies*) can be used when mounting to walls or windows.

**MOUNTING BRACKETS** - Attach each mounting bracket onto the wall with screws provided. Grip-a-Strip conceals the bracket when snapped into place.

**CHAIN MOUNT** - When a ceiling mount is needed, this mounting option is perfect. *Extra charge applies.*

Please refer to the price list for specific pricing information. Please telephone customer service for further application information.
