

Imagery Basemaps

Accurate, expertly curated,
imagery reference layers

When the stakes are high, start with the right foundation.

Businesses and decision makers rely on precise and consistently updated geoinformation to make informed decisions and prepare effective action plans. To ensure that decision makers have the right information to start with, an accurate and regularly updated imagery basemap is key.

Imagery basemaps are reference layers curated by Airbus experts to ensure highly accurate, color-balanced and nearly cloud-free coverage with minimised haze and seasonal differences between contiguous images. They can be ordered globally or by a specific area of interest, are available off-the-shelf or on-demand with fully customised parameters to meet specific project needs.

Global Basemap

The Global Basemap is an **off-the-shelf** multi-resolution layer (30cm, 50cm, 1.5cm) providing complete and nearly cloud-free coverage with minimised haze and seasonal differences between contiguous images. Airbus is committed to evolving the Global Basemap to meet client needs for many years to come.

We also offer the 1.5m resolution layer: fully mosaicked, available off-the-shelf, also known as the **SPOT Global layer**.

Tailored Basemaps

Tailored Basemaps offer the flexibility to select customised parameters such as **mosaic processing**, resolution, freshness to meet the specific needs of each project. These are available in all resolutions up to HD15.

| | Global Basemap | Tailored Basemaps |
|---------------------------|---|--|
| Availability | Off-the-shelf | On-demand |
| Product resolution | Multi-resolution layer: 30cm over all cities, 50cm over the highest populated areas, 1.5m over the rest of the Earth's landmass Available in 1.5m layer only as the SPOT Global Layer. | Upon request All resolutions up to HD15 |
| Image processing | Premium data (on average): <ul style="list-style-type: none"> • Angle: 30° • Cloud cover: 5% • Geolocation accuracy: ≤5m CE90 • 82% of data is <2 years old • Partial mosaic processing | All parameters upon request |
| Delivery mode | Download (digital copy) or streaming | |

Purchase the entire globe or just your area of interest

Mosaic processing

Improves the geometrical coherence and accuracy between imagery and applies a global colour adjustment that minimises the radiometric differences. This Airbus technology offers a **seamless outline**.
