Bulk Screen Capture, Screen Capture, Screen Grab. By Christian Traber. Example: show main_menu and display a list of all of the. Make sure your label is on top of the button. . For the first one, you have to click on the first button, then click on the second. When the form first loads, the first button, and subsequent ones, are blank, since the. For the second one, you have to click on the first button, then click on the second. . For the third one, you have to click on the first button, then click on the second. Then click on the first button again. . Now the user is in a situation where they click on a button but it has no text on it. . I am going to be using a listbox control and my listbox item label will be the name of the button.. Next, create the listbox control and set the item index of your listbox to 0. . Now click the button, it should now have a blue border.. Next, you need to set the tag to the button. . I used the command below to set the label. . Now you need to bind the current button to the label. . For this, you need to right-click on the label and click on property sheet. . Next, open the click property. . Click the arrow next to the property, click event and click event handler. . This opens up the events for the button. . By default, they are set to nothing. . To have a click event, make sure that the field is set to button1_click and the field is set to the same name of the control. . To have a double click event, make sure that the field is set to button1_dbclick and the field is set to the same name of the control. . Now that the event is set, you need to link them to the label. . For this, select the control. . Next, click the arrow next to the properties. . Next, click the arrow next to the events. . Next, you will find the event. . Now you need to set the value of the event to the control that you set it to in the first part 2d92ce491b
