Proactive BLUEFIN Approach

BLUEFIN’s approach is to assess what a portfolio includes, gathering hundreds, even thousands, of data points. Using predictive analytics, BLUEFIN builds portfolio-wide, program management plans, optimizing repair and restoration schedules that improve the life of assets over time, freeing up budget room to execute strategically timed replacement projects at the right time to smooth out budgeting and reduce total cost of ownership. We offer total transparency, empowering clients to leverage their facility data to drive critical business decisions.

Reactive Approach

Many companies avoid building a routine maintenance and repair plan which can lead to premature failure of roof and pavement assets. Others adopt a “wait until it breaks” approach, often replacing roofs that could otherwise be sustained, staving off construction costs that are three to four times that of a restoration project.

Some of BLUEFIN’s current clients:
