

Hybrid Hedging Solution

The Hybrid Hedging Solution is a block and index hybrid purchasing strategy where certain portions of a client's electricity load (blocks) during the day are fixed, while others are at index-based pricing, in order to efficiently take advantage of a client's consumption daily consumption patterns.

Key Benefits

- Hybrid Purchasing Strategy
- Customized to client's risk tolerance and usage patterns
- Combines fixed blocks with index-based pricing
- Contract terms of 12 to 36 months available

Do I have control over the amount of electricity load that is fixed versus indexed and timing when I choose a Hybrid Hedging Strategy?

Yes, A Hybrid Hedging Strategy allows clients to choose when and how much of their energy is secured at a particular price level. This involves strategically placing blocks of a client's electricity load into fixed price contracts, while putting other blocks in index-based contracts. You can choose the fixed and index-based percentage that is right for your business goals, risk tolerance, and perception of market conditions.

Patriot Energy neither represents nor guarantees that this plan will result in higher or lower costs in the future when compared to the utility's Basic Service price or any particular competitive supplier's price. This document is not a contract for electric supply and Patriot Energy does not warrant the terms above fully or accurately represent the terms of actual electric supply.
