Small Change.

Big Difference. PharmFilm®.

How an innovation the size of your thumbnail can improve your brand's experience.

Taking or administering a medication is one of the most direct—and powerful—experiences a consumer can have with a brand. How do you make yours the best experience possible?

PharmFilm® is an ultra-thin strip that dissolves on contact inside a patient's mouth—no water needed—for incredibly easy medication delivery. Convenient, individualized dose packaging allows patients to take the product anywhere, anytime.

PharmFilm® is ideal for:

- CNS diseases where swallowing can be a struggle
- Acute situations when time to administration is critical
- Cases where drug absorption is a key consideration
- Developing patient-friendly dosage forms useful for pediatric populations

To find out how PharmFilm® can help you step away from the pack, contact PharmFilm2018@aquestive.com or visit aquestive.com.
