PHILOSHOPIC ®

Job Opening: Junior Cloud Engineer/Software Developer

At PHILOSHOPIC we empower exciting consumer experiences through our Cloud Commerce Technologies. We are looking for a **Junior Cloud Engineer/Software Developer** to join our team in Cyprus!

Interested? Just check if you fit the position and take action!

What will be my job description?
You will actively be involved in the development of PHILOSHOPIC's software products and the delivery of customer projects internationally. Some of the products are mature whilst others are new or under development. You will be supervised by the development team leader and encouraged to bring new ideas to the table as well as use your creativity to add new features or improve current ones.

What kind of products will I be working on?
Our core products are cloud based frameworks serving customers 24/7, that handle transactions worth millions every month or enable certain services for consumers, retailers or suppliers. You will be given full training of the business and technical aspects as soon as you join!

What technical skills do I need to have?
You should have excellent knowledge of Object Oriented Programming concepts and principles. The majority of our products/systems are written in Java so a good understanding of core Java concepts is expected. Additionally, we also use C#, php, javascript and whatever else is needed to get the job done.

It would be beneficial if you have understanding of web-app programming concepts, iOS or Android development or experience using Git and Maven. Being aware of concepts in designing transactional systems as well as knowledge of IT security is always a plus. It is way more important though, to have good analytical skills, the ability to learn quickly on the job, and solve problems efficiently.

What kind of a person are you looking for?
First of all, you will be a key contributor to the team performance, product success, and our customer satisfaction. Although you will always have someone to seek guidance from, you should be self-standing, self-driven and challenge seeking.

You should also be comfortable discussing with customers, partners and users of various levels and properly documenting things. You may occasionally engage to gather requirements and turn them into product features or you may be engaged in workshops to scope an offering for a customer. Finally, being fun or boring, loud or quiet, you should be comfortable working WITH and FOR the Team!

Where will I be based?
You will have access to a workspace at our PHILOSHOPIC offices in Nicosia - you may occasionally spend time at the customer premises as well when needed, especially during scoping sessions or when delivering projects. You will be measured on your deliverables rather than the hours spent in office. You may be asked to travel abroad if necessary but this is not expected to happen frequently.

How many years of past experience do you ask for?
Number of years doing a job is always an asset — however, this matters much less than being a GOOD developer with the right character towards becoming a superstar developer. If you have the right skills and attitude, the number of years in past service does not necessarily change who you are today. So even if you are fresh and confident, you CAN quickly prove that you are capable to get the job done - this is what matters!

I think I fit well in that role! What's the next step?
Great! We are excited you find this opportunity to become a PHILOSHOPER a great match to your career aspirations! Forward your CV and anything further you feel is related by email to careers@philoshopic.com.

We will then contact you to inform you on the next step - It will either be an appointment to meet and talk or we will inform you that we are not taking any further action depending on the volume of applications that we receive.

Note: Only candidates who fit the description will be contacted in relation to their application.
