

Job Opening: Cloud Engineer/Software Developer

At PHILOSHOPIC we empower exciting consumer experiences through our Cloud Commerce Technologies. We are looking for an experienced, challenge seeking Cloud Engineer/Software Developer to join the team in Cyprus

Interested? Just check if you fit the position and take action!

What will be my job description

You will actively be involved in the architecture design and development of PHILOSHOPIC's software products and the delivery of customer projects internationally. Some of the products are mature whilst others are new or under development. You will be supervised by the development team leader and encouraged to bring new ideas to the table as well as use your creativity to add new features or improve current ones.

What kind of product will I be working on?

Our core products are cloud native frameworks serving customers 24/7, that handle multi-million transactions or enable certain services for consumers, retailers or suppliers. We have 3 families of products - our consumer engagement framework based (Solutions for Rewards, Campaigns, Payments, Self Service Shopping and more), our e-vouchers framework based (End-to-end management of digital products) and bespoke applications for large organisations around our domains of expertise. You will focus mostly on the back end and will be given full training of the business and technical aspects as soon as you join!

What technical skills do I need to have?

You should have excellent knowledge of Object Oriented Programming concepts and principles, understanding web-app development concepts, be familiar with designing transactional systems including knowledge of IT security as well as familiar designing, developing and consuming APIs.

Most of our systems are written in Java thus we expect you to be proficient in Java. We also use C#, php, javascript, .NET and whatever else is needed to get the job done. Knowledge of linux system administration, SQL and packaging apps, is useful while you should be well familiar and experienced with the use of source control and testing frameworks. Experience in Google Cloud Platform App Engine deployment will be a strong advantage as well as experience using Git and Maven. Understanding of iOS or Android development are very welcome.

What kind of a person are you looking for?

First of all, you will be a key contributor to the team performance, product success, and our customer satisfaction. You will get guidance and support from the senior team members but also seen as a source of help and guidance by junior team members. You should thus be self-standing, self-driven and challenge seeking. Good analytical skills, the ability to learn quickly on the job, and solving problems efficiently is what makes our team fit for our customers' needs.

You should also be comfortable discussing with customers, partners and users of various levels and properly documenting things. You may occasionally engage to gather requirements and turn them into product features or you may be engaged in workshops to scope an offering for a customer or explain a solution. Finally, being fun or boring, loud or quiet, you should be comfortable working WITH and FOR the Team!

Where will I be based?

You will be part of our growing team based out of our PHILOSHOPIC offices in Nicosia. You will be measured on your deliverables rather than the hours spent in office - we do work normal hours Mon-Thu and half of Friday and regularly have team functions and ongoing learning. You may be asked to travel abroad if necessary but this is not expected to happen frequently.

How many years of past experience do you ask for?

We are looking for someone with at least 2 years of experience and ideally 5. Number of years doing a job though don't mean much if passion for fast and continues learning and professional ethos are missing - In any case, we provide the tools, environment and the support to make things happen!

I think I fit well in that role! What's the next step?

This is the time that we are excited you find the position of Back-End Developer/Cloud Engineer at PHILOSHOPIC a great fit for your career aspirations.

We thus look forward to receive your CV and any past work portfolio/references by email at careers@philoshopic.com. You can check us out at www.philoshopic.com

We will then contact you to inform you on the next step - It can be either an appointment to meet and talk or we inform you that the position has been given or your background does not really fit what we are looking for.

Note: Only candidates who fit the description will be contacted in relation to their application progress.
