Home Inspector performing the Air Quality Survey

Owner: John2 Sander (danielshimko+demo@digienv.com)

Manager of the Home Inspector
*Possibly the same as the Home Inspector

Creator: Daniel Shimko (danielshimko86@gmail.com)

Sensors: Audio via Android/iOS, GPS via Android/iOS, Images via Android/iOS, Notes via Android/iOS, Pocket Particle AQI 2.0, BLE

Pocket Particle 2.0 Summary of all the Property Rooms Air Quality Readings

Room	# of Meas. collected	PM2.5 Min (µg/m³)	PM2.5 Average (µg/m³)	PM2.5 Max (µg/m³)	PM10 Min (µg/m³)	PM10 Average (µg/m³)	PM10 Max (µg/m³)
Exterior	23	5.2	8.2	14.0	4.0	5.3	6.0
Family Room	23	7.4	9.5	12.0	4.0	5.0	6.0
Washroom Recent Shower	23	8.0	192.6	999.0	5.0	50.9	305.2
Basement Mold Detected	23	7.4	79.2	357.4	6.0	67.2	293.6
Kitchen	25	5.0	16.0	43.0	4.0	5.3	7.0

Room	# of Meas. collected	VOC Min (ppb)	VOC Average (ppb)	VOC Max (ppb)	eCO2 Min (ppm)	eCO2 Average (ppm)	eCO2 Max (ppm)
Exterior	23	0.0	0.4	1.8	400.0	403.5	415.4
Family Room Improper Ventilation	23	1027.2	2165.2	7897.4	2150.0	2680.0	5364.2
Washroom	23	10.0	23.5	33.6	466.0	557.8	621.2
Basement	23	0.0	14.7	74.4	400.0	499.2	891.0
Kitchen	25	5.8	455.5	2070.2	440.8	1363.1	2632.8

Recent Cleaning or Cooking

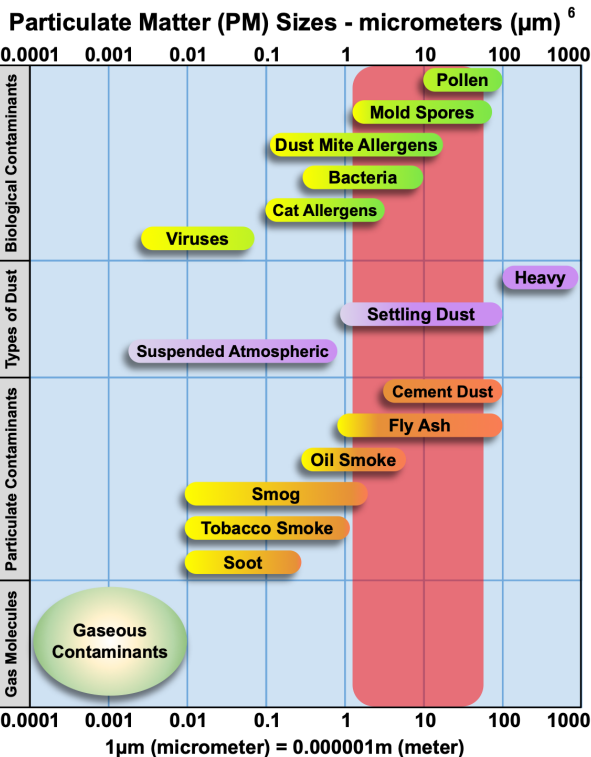

This page is used to and explain the results of the Air Quality and Mold Detection Survey to the customer

WHAT DOES THE AIR QUALITY SURVEY DATA MEAN?

PM2.5 & PM10 - Particulate Matter:

Reductions in airborne particulate matter have been shown to have a wide range of positive effects¹. The toxicity of particulate matter depends on the type of particulate matter, but elevated particulate levels of all types have been associated with adverse health effects.

PM2.5/10 (µg/m³)	LEVEL ²	MEANING
0 - 49.9	Good	Air quality is considered satisfactory air pollution poses little or no risk
50 - 99.9	Moderate	Air quality is acceptable
100 - 149.9	Unhealthy for Sensitive Groups	Members of sensitive groups may experience health effects
150 - 199.9	Unhealthy	Everyone may begin to experience health effects
200 - 299.9	Very Unhealthy	Health Alert: Everyone may experience more serious health effects
> 300	HAZARDOUS	Health Warning: Emergency conditions

eTVOC - Equivalent Total Volatile Organic Compound:

Total VOC concentration represents all VOCs in the air. Some types of VOCs like formaldehyde are very dangerous and should be monitored at lower levels. Below is guidance published by the German Federal Environmental Agency that allows for direct comparison to the assessment data readings.

eTVOC (ppb)	LEVEL	EXPOSURE LIMIT	RECOMMENDATIONS ³
0 - 64.9	Background	No Limit	No action required
65 - 219.9	Normal	No Limit	Ventilation recommended
220 - 659.9	Elevated	< 12 Months	Ventilation recommended, look for sources
660 - 2,199.9	High	< 1 Month	Intensified ventilation, look for sources
> 2,200	Dangerous	Hours	Should be avoided, intense ventilation

eCO2 - Carbon Dioxide Equivalent:

Elevated levels of carbon dioxide can cause headache and fatigue, while very high concentrations can cause dizziness, nausea, and vomiting. Extremely high levels can cause loss of consciousness and even death.

eCO2 (ppm)	LEVEL	HEALTH EFFECTS ⁴⁻⁵
400.0	Background	Minimum atmospheric level for outdoor air
400.1 - 999.9	Normal	Typical normal concentrations found in indoor air
1,000 - 1,999.9	Elevated	Symptoms will begin to develop, starting with drowsiness
2,000 - 4,999.9	High	Headaches, sleepiness, poor concentration, increased heart rate & slight nausea
> 5,000	Dangerous	Dizziness, fatigue, nausea, vomiting, loss of consciousness and death

Elevated Indoor Air Quality Readings? Possible Sources and Potential Solutions

PM_{2.5} & PM₁₀ - Particulate Matter

Sources	Solutions
Pollen, heavy dust, bacteria, pet allergens, fly ash, cement dust, oil smoke	Install an indoor air purification system
Recent cooking, showering or using an brand new oven	Increase air ventilation when cooking and showering
Burning of candles, fireplaces, wood, fuels, tobacco	Eliminate indoor smoking and burning of materials
Recent construction, drywall, sanding, flooring, etc.	Follow up with indoor air quality lab testing
Visible or hidden dry / dead mold will cause airborne mold spores	Locate and remediate any visible sources of mold

eTVOC - Equivalent Total Volatile Organic Compounds

Sources	Solutions
New items in the property such as, carpets, drapes, furniture, flooring, drywall, etc.	Increase air circulation and ventilation when new sources of VOCs are brought into the property
Burning of fuels such as gas, wood and kerosene and tobacco products	Identify and eliminate items that constantly off gas VOC
Perfumes, hair spray, cleaning agents, dry cleaning fluid, paints and paint thinner, lacquers, varnishes, hobby supplies, alcohols, vinegars, gas leaks	Follow manufacturers labels when using household chemicals and cleaning solutions
Formaldehyde, one of the most common VOC, It is common in many building materials such as plywood, particleboard and glues	Install an indoor air purification system and / or UV light air cleaning system
Mold can off gas a number of different VOCs	Follow up with indoor air quality lab testing

eCO₂ - Carbon Dioxide Equivalent

Sources	Solutions
The earth's atmosphere contains 400 ppm CO ₂	Increase air circulation and ventilation
Byproduct of normal human functions (exhaling)	Examine the HVAC system is operating efficiently
Excessive number of people in a property	Open the property windows
Improper ventilation or an unbalanced HVAC system	Turn on exhaust fans
Burning fossil fuels or decaying vegetation	Increase the number of times the HVAC fan runs per day
