October 29, 2020

Roland G Roberts, PhD,
Senior Editor, PLOS BIOLOGY

Dear Dr. Roberts,

Thank you so much for tentatively accepting our manuscript entitled “Loss of hepatic aldolase B activates Akt and promotes hepatocellular carcinogenesis by destabilizing the Aldob/Akt/PP2A protein complex” (PBIOLGY-D-20-01535R2). We have renamed the two supplementary data files as “S1_Data” and “S2_Data”, and cited them as the location of the underlying data in all of the relevant Figure legends. In addition, we revised the title of our manuscript to “Loss of hepatic aldolase B activates Akt and promotes hepatocellular carcinogenesis by destabilizing the Aldob/Akt/PP2A protein complex”.

In summary, we really appreciate the opportunity to revise our manuscript and sincerely thank the reviewers for their comments and suggestions. We hope that our revised manuscript will soon be officially accepted by PLOS BIOLOGY.

Sincerely,

Huiyong Yin, Ph.D., Principal Investigator and Professor
