Figure S12

A  Telomere length against sample group
(5 outliers removed from Host)

B  DFT1 Telomere length:
Predicted length of pure sample, plus residual error

\text{Y intercept} = 15.274 - 0.004 \times \text{Year} - 2.524 \times \text{Purity}
\text{ANOVA(intercept p-value)}:
\text{Year} > 0.435, \text{Purity} > 1.53 \times 10^{-53}
