S12 Fig. Regression coefficients with 95% confidence intervals for the (A) temperature (circle) and number of trips (cross) model and (B) temperature (circle) and population at home (cross) model, with a shorter pandemic period (15 months, January 2021-March 2022). (C) Regression coefficients for the temperature and number of trips model with dummy pandemic variable and interactions terms (depicted with “:”). **, p-value ≤ 0.01; *, p-value ≤ 0.05; ns, non-significant.
