Figure S5. AHR and ARNT are upregulated by TCF21 overexpression (A) RNA-Seq (FDR = 6.57x10^{-10}), and (B) qPCR (0.89±0.06 vs. 1.29±0.12, p=0.018). (C) ARNT is not significantly changed in TCF21 overexpression RNA-Seq, but (D) upregulation was confirmed with qPCR (0.95±0.02 vs. 1.25±0.02, p=0.0008).
