INFORMATION SHEET

Professional Hygienist Perspectives on Extreme Heat Management in the Workplace

Global warming is likely to lead to more extreme climatic events. The potential impact of climate change has received international attention, and there is a growing body of occupational and environmental hygiene literature on the topic. However, there is a gap in knowledge on the current perspectives and opinions of professional hygienists who provide advice, and particularly in a country where extreme heat episodes are likely to be more common.

Please take 5 minutes to complete the anonymous questionnaire that covers current and future concerns and return in the box at the registration desk by **3:00 pm on Tuesday** (4th December) to be in the draw to **win a $100 Coles-Myer Christmas gift voucher and a $200 Christmas donation to an AIOH-sponsored charity**. The findings of the survey will be provided in a forthcoming AIOH Newsletter.

**Ethics approval:** University of Adelaide (H-200-2011)

**Eligibility:** AIOH members attending the AIOH 2012 conference

Your participation is greatly appreciated.
