

1 **S1 Table. Sample sizes for percent time spent within the nest.**

	Day post-injection						
Treatment	3	4	5	6	7	8	9
Infected	20	19	19	18	17	15	13
Sham	20	20	19	19	19	19	19
Healthy	31	30	29	29	28	28	28

2

3 We performed the observations over the course of seven days (3-9 days post-injection), during the
4 daylight hours (0900-1700). We collected these data from both sub-colonies of genetic colony 3.
5 Each cell has the number of focal individuals followed per day to determine the percent of time
6 each treatment spent inside the nest.
