

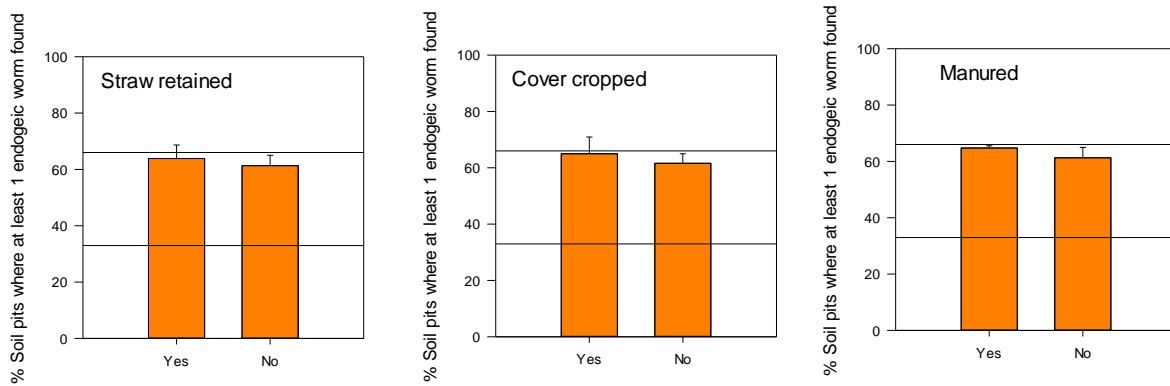

Figure S2: The #60minworm survey found no significant ($p > 0.05$) impacts from straw retention or manuring management practices. Cover cropping had no significant ($p > 0.05$) impact on epigeic or endogeic earthworm presence, but a beneficial impact ($p < 0.05^*$) on anecic earthworm presence.

Epigeic earthworms:

Endogeic earthworms:

Anecic earthworms
