Uncropped images of immunoblots presented in Figure 2B. The Ponceau S stain is of the original testisin blot indicating total protein transferred to PVDF. Samples were rerun and a new blot probed for β-actin.
Uncropped images of immunoblots presented in Figure 4E (highlighted by dashed white boxes). Testisin, ZO-1, Occludin, β-Catenin, Claudin-5, VE-Cadherin, pVE-Cadherin, and GAPDH are indicated by black arrows.
Uncropped images of immunoblots presented in Supplementary Figure S2 and S3.
