S2 Fig. Correlation of amino acid motif recognition and age of vaccinated subjects. Panel A: The fold enrichment in IgG with specificity for the amino acid motifs K[FY][LM]XFXQ vs. P[EDT]WRXY is shown. Each symbol corresponds to a different vaccinated individual. Panel B: The fold enrichment in IgG with specificity for the amino acid motif KWXXFQQ (Y-axis) is plotted against age (X-axis). Trend lines were fitted by linear regression. Spearman rank correlation ($r_s$) is displayed.
