S3 Fig. Correlation between IgG recognition of amino acid motif [FY]XX[QE]LXXWF and linear epitope LE-1. The PIWAS score (Y-axis) for IgG recognition of LE-1 for individual subjects was plotted vs. the fold enrichment in IgG (X-axis) with specificity for the amino acid motif [FY]XX[QE]LXXWF in subjects that received mRNA vaccine. Each symbol corresponds to a different vaccinated individual. Trend lines were fitted by linear regression. Spearman rank correlation ($r_s$) is displayed.
