S4 Fig. Immunofluorescence slides from two representative subjects who received active/vaccine-coated HD-MAP or placebo HD-MAP.
S4 Fig. Immunofluorescence slides from two representative subjects. Subjects received active/vaccine-coated HD-MAP (left) or placebo HD-MAP (right). Biopsies were taken on day 1 (pre) and 4 (post) HD-MAP application. Following fixation, paraffin-embedded 5 µm thick sections were subjected to immunofluorescent staining. DAPI (blue); AF555 (yellow) for specific cell surface markers.
