</tbody>
</table>

Introduction
### Background and rationale

6a Description of research question and justification for undertaking the trial, including summary of relevant studies (published and unpublished) examining benefits and harms for each intervention

### Introduction

6b Explanation for choice of comparators

N/A

### Objectives

7 Specific objectives or hypotheses

Methods. Table 2

### Trial design

8 Description of trial design including type of trial (eg, parallel group, crossover, factorial, single group), allocation ratio, and framework (eg, superiority, equivalence, noninferiority, exploratory)

Methods. Study design

### Methods: Participants, interventions, and outcomes

#### Study setting

9 Description of study settings (eg, community clinic, academic hospital) and list of countries where data will be collected. Reference to where list of study sites can be obtained

Methods. Study design

#### Eligibility criteria

10 Inclusion and exclusion criteria for participants. If applicable, eligibility criteria for study centres and individuals who will perform the interventions (eg, surgeons, psychotherapists)

Methods. Eligibility criteria

#### Interventions

11a Interventions for each group with sufficient detail to allow replication, including how and when they will be administered

Methods. Intervention

11b Criteria for discontinuing or modifying allocated interventions for a given trial participant (eg, drug dose change in response to harms, participant request, or improving/worsening disease)

N/A

11c Strategies to improve adherence to intervention protocols, and any procedures for monitoring adherence (eg, drug tablet return, laboratory tests)

N/A

11d Relevant concomitant care and interventions that are permitted or prohibited during the trial

N/A
Outcomes 12  Primary, secondary, and other outcomes, including the specific measurement variable (eg, systolic blood pressure), analysis metric (eg, change from baseline, final value, time to event), method of aggregation (eg, median, proportion), and time point for each outcome. Explanation of the clinical relevance of chosen efficacy and harm outcomes is strongly recommended.

Methods. Outcome assessment and measurement procedures

Participant timeline 13  Time schedule of enrolment, interventions (including any run-ins and washouts), assessments, and visits for participants. A schematic diagram is highly recommended (see Figure) Fig 1

Sample size 14  Estimated number of participants needed to achieve study objectives and how it was determined, including clinical and statistical assumptions supporting any sample size calculations.

Methods: Sample size calculation

Recruitment 15  Strategies for achieving adequate participant enrolment to reach target sample size.

Methods: Sample size calculation; Acknowledgements

Methods: Assignment of interventions (for controlled trials)

Allocation:

Sequence generation 16a  Method of generating the allocation sequence (eg, computer-generated random numbers), and list of any factors for stratification. To reduce predictability of a random sequence, details of any planned restriction (eg, blocking) should be provided in a separate document that is unavailable to those who enrol participants or assign interventions.

Methods: Randomization

Allocation concealment mechanism 16b  Mechanism of implementing the allocation sequence (eg, central telephone; sequentially numbered, opaque, sealed envelopes), describing any steps to conceal the sequence until interventions are assigned.

Methods: Randomization

Implementation 16c  Who will generate the allocation sequence, who will enrol participants, and who will assign participants to interventions.

Methods: Randomization

Blinding (masking) 17a  Who will be blinded after assignment to interventions (eg, trial participants, care providers, outcome assessors, data analysts), and how.

Methods: Randomization
If blinded, circumstances under which unblinding is permissible, and procedure for revealing a participant’s allocated intervention during the trial

N/A

**Methods: Data collection, management, and analysis**

**Data collection methods** 18a Plans for assessment and collection of outcome, baseline, and other trial data, including any related processes to promote data quality (eg, duplicate measurements, training of assessors) and a description of study instruments (eg, questionnaires, laboratory tests) along with their reliability and validity, if known. Reference to where data collection forms can be found, if not in the protocol

Methods: Baseline assessment

18b Plans to promote participant retention and complete follow-up, including list of any outcome data to be collected for participants who discontinue or deviate from intervention protocols

N/A

**Data management** 19 Plans for data entry, coding, security, and storage, including any related processes to promote data quality (eg, double data entry; range checks for data values). Reference to where details of data management procedures can be found, if not in the protocol

N/A

**Statistical methods** 20a Statistical methods for analysing primary and secondary outcomes. Reference to where other details of the statistical analysis plan can be found, if not in the protocol

Methods: Statistical analysis

20b Methods for any additional analyses (eg, subgroup and adjusted analyses)

Methods: mitochondrial analysis

20c Definition of analysis population relating to protocol non-adherence (eg, as randomised analysis), and any statistical methods to handle missing data (eg, multiple imputation)

N/A

**Methods: Monitoring**

**Data monitoring** 21a Composition of data monitoring committee (DMC); summary of its role and reporting structure; statement of whether it is independent from the sponsor and competing interests; and reference to where further details about its charter can be found, if not in the protocol. Alternatively, an explanation of why a DMC is not needed

N/A
21b Description of any interim analyses and stopping guidelines, including who will have access to these interim results and make the final decision to terminate the trial
N/A

Harms 22 Plans for collecting, assessing, reporting, and managing solicited and spontaneously reported adverse events and other unintended effects of trial interventions or trial conduct
N/A

Auditing 23 Frequency and procedures for auditing trial conduct, if any, and whether the process will be independent from investigators and the sponsor
N/A

Ethics and dissemination

Research ethics approval 24 Plans for seeking research ethics committee/institutional review board (REC/IRB) approval
Methods: Ethics

Protocol amendments 25 Plans for communicating important protocol modifications (eg, changes to eligibility criteria, outcomes, analyses) to relevant parties (eg, investigators, REC/IRBs, trial participants, trial registries, journals, regulators)
N/A

Consent or assent 26a Who will obtain informed consent or assent from potential trial participants or authorised surrogates, and how (see Item 32)
Methods: Subject recruitment

26b Additional consent provisions for collection and use of participant data and biological specimens in ancillary studies, if applicable
N/A

Confidentiality 27 How personal information about potential and enrolled participants will be collected, shared, and maintained in order to protect confidentiality before, during, and after the trial
N/A

Declaration of interests 28 Financial and other competing interests for principal investigators for the overall trial and each study site
Competing interest

Access to data 29 Statement of who will have access to the final trial dataset, and disclosure of contractual agreements that limit such access for investigators
Disclosure of interests
