Figure S2. Effect of picrotoxin (PTX) on CrGluClα-mediated currents. A. Current measured at 60 mV in an oocyte expressing the *Caligus* receptor. Additions to the bathing medium are shown in the boxes above. B. Concentration dependence of PTX effect. The points correspond to data from four separate experiments. The EC<sub>50</sub> of 3.2 µM is the mean of hyperbolic fits to the individual data.
