S10 Figure. The sRNAs *Mts2823* and *Mcr11* do not affect RIF tolerance in WT or Δ*rnj* Mtb. Time-killing curves in presence RIF (0.6 µg/mL) for strains with deletion or overexpression of *Mts2823* (A) or *Mcr11* (B) strains are shown. OE indicates overexpression of the indicated sRNA. Growth in drug-free media was also assessed. *p<0.05, **p<0.001, two-way ANOVA. Red stars: comparison of WT to Δ*rnj*. Violet stars: comparison of WT Δ*Mcr11* to WT. Tan stars: comparison of Δ*rnj* Δ*Mcr11* to WT. The apparent increase in RIF tolerance seen here for the WT Δ*Mcr11* strain was not reproducible.
