S3 Fig. CCMV helix B directs yellow fluorescent protein to ER membranes in plant cells.

Confocal microscope images showing YFP-tagged CCMV 1a helix B (HB) with an mC-tagged ER marker (top row). The bottom panel shows the localization of YFP-tagged CCMV 1a HB in histone 2B-RFP transgenic *N. benthamiana* cells. Solid arrows denote the nER localization and dotted arrows represent the nucleus. Scale bars: 50µm
