

SOLUTION OVERVIEW

AGENTLESS, NO SCANNERS

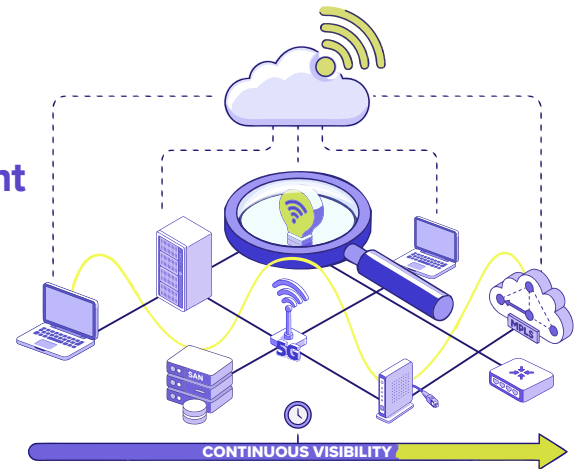

The benefits of zero-footprint asset management

WanAware discovers and inventories every asset in your environment without deploying agents and without scanner appliances; no endpoint software, no privileged credentials, no on-premises boxes to rack, patch, and babysit. Discovery runs on the cloud, hypervisor, network, and EDR integrations already in place, plus WanAware's global edge network. The result is a single benefit that shows up everywhere: full, continuous visibility delivered without adding a single new footprint to the environment.

This discovery capability is part of WanAware's **Relationship Graph**, which turns every asset it finds into a live, continuous view of the entire environment — mapping how assets connect and depend on one another as the environment changes, not as of the last scan or check-in.

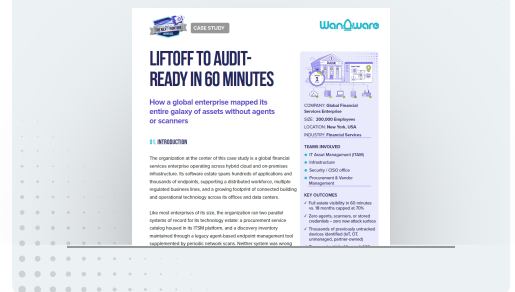

Total Coverage, Every Asset Class

- ✓ **Reaches what agents can't:** OT controllers, SCADA gear, network hardware, IoT sensors, medical technology, and unmanaged or partner-owned devices are inventoried like everything else.
- ✓ **One unified view:** data centers, multi-cloud, SaaS, and edge devices are merged into a single source of truth.
- ✓ **Tracks short-lived workloads:** containers, serverless functions, and virtual instances, automatically
- ✓ **Finds what other tools miss:** shadow IT and forgotten devices are surfaced instead of staying invisible.

Ready to map your entire asset galaxy in under an hour?

Read the Case Study

MINUTES, NOT MONTHS

Populated, relationship-mapped inventory appears in the first working session, not after a multi-quarter rollout project.

NO DEPLOYMENT PROJECT

Nothing to install means nothing standing between signing and seeing value.

ALWAYS CURRENT

Continuous, live discovery replaces static snapshots that go stale between scans or check-ins.

SECURITY & RISK REDUCTION

- ✓ **Zero new attack surface:** nothing installed on the assets being inventoried means nothing new for an attacker to target.
- ✓ **No credential sprawl:** no root-level or privileged access to negotiate, document, and rotate for another vendor.
- ✓ **Fewer unknowns, fewer incidents:** the unmanaged and forgotten assets most likely to cause or hide an incident become known and monitored.

LOWER OPERATIONAL BURDEN

- ✓ **Nothing to deploy or maintain:** no agent rollouts to manage and no on-premises appliances to rack, license, and patch.
- ✓ **Frees up IT and security time:** teams stop babysitting collection infrastructure and start using the data it produces.
- ✓ **Lower total cost of ownership:** eliminating agent and appliance overhead reduces both the direct cost and the hidden labor cost of asset visibility.

AN ARCHITECTURAL ADVANTAGE

Agentless-and-scanner-free isn't a setting competitors can switch on; it's a result of how WanAware is built to collect data in the first place. Platforms designed around an agent or an appliance can't remove it without rebuilding their collection layer from scratch. That's why the benefits above are structural, not incremental.
