

Development Guide

Happy Hollow is the latest and greatest thing for child development. Its various play events are designed to teach children important skills that will follow them for the rest of their lives!

Fine Motor Skills

Children should be developing the tiny muscles in their hands, fingers and wrists. At Happy Hollow children are working these tiny muscles, developing skills they will use throughout their life for tasks such as typing or eating.

Lily Lady Bug

Marty the Mushroom

Gross Motor Skills

Auditory Stimulation

Auditory Stimulation is when focused sound is produced that creates an effect on the nervous system. Auditory stimulation in young children can improve gross and fine motor skills, memory capacity and speech perception.
