PROTECTIVE ROOF FOR HEAT PUMPS

SMART CONSTRUCTION, PREPARED FOR CHANNEL FEEDTHROUGH. MOUNTABLE ON COVER PANELS

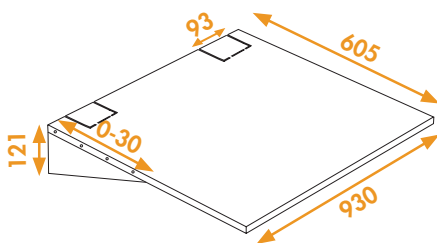

HEAT PUMP ROOF

There is risk of frosting of your outdoor unit during heavy rainfall. Icing makes defrosting more frequent, reducing efficiency and ultimately raising the electricity bills.

Our modern, stylish roof protects your heat pump. It's easy to install on all types of exterior walls and you can easily insert the protective channel on either the left or right side.

FEATURES

- Protects the pump from snow and reduces the risk of icing.
- Protective channel easily inserted.
- Suitable for all air-to-air heat pumps & many air-water.
- Easily mounted even on walls with cover panel.
- Durable, made of galvanized steel, powder coated.
- Protective channel socket fit ClimaLine 65, 70, 80 & 90 systems
